KANNUR UNIVERSITY
കണ്ണൂർ സർവകലാശാല

(Abstract)

FYUG BSc Computer Science Programme - Modified Scheme and Syllabus of the Third Semester - Approved and Implemented with effect from 2024 Admission - Orders Issued

---

ACADEMIC C SECTION

ACAD C/ACAD C3/21647/2024   Dated: 09.01.2026

Read:-1. U.O. of even number dated: 29/11/2024

2. The Minutes of the Meeting of the Board of Studies in Computer Science (UG) held on 04.10.2025

3. E-mail dated: 21.10.2025 from the Chairperson, Board of Studies in Computer Science (UG)

4. Minutes of the meeting of the Standing Committee of the Academic Council held on 05.12.2025

5. The orders of the Vice Chancellor in the file no.ACAD /ACAD C3/17755/2025 dtd. 01.01.2026

ORDER

1.As per the paper read as (1) above, the Scheme and Syllabus (Six Semesters) of the FYUG B.Sc. Computer Science programme was approved and implemented with effect from 2024 Admission.

2.On verification of the third semester Scheme and Syllabus, certain errors in the distribution of marks were noticed and the matter was communicated to the Board of Studies in Computer Science (UG) for necessary action.

3.The Chairperson, Board of Studies in Computer Science (UG) vide paper read as (3) above, submitted the modified third semester Scheme and Syllabus of FYUG Computer Science (UG) Programme, along with the minutes of of the Board of Studies in Computer Science (UG) held on 04.10.2025, for approval and implementation w e f 2024 admission.

4.The Minutes of the meeting of the Board of Studies in Computer Science (UG) held on 04.10.2025 and the corrected Scheme and Syllabus submitted by the Chairperson, Board of Studies in Computer Science (UG) were forwarded to the Dean, Faculty of Technology and the Dean after vetting the Scheme and Syllabus, recommended to approve the same .

5. The aforesaid minutes of the meeting of the Board of Studies in Computer Science (UG) and the corrected Scheme and Syllabus were placed before the Standing Committee of the Academic Council held on 05.12.2025 and the Standing Committee of the Academic Council vide paper read (4) recommended to approve the same.

6. The Hon'ble Vice Chancellor after considering the urgency of the matter and in exercise of the powers of the Academic Council conferred under Section 11(1) Chapter III of the Kannur University Act, 1996 and all other enabling provisions read together with , approved the modified scheme and syllabus of the Third semester FYUG BSc Computer Science Programme for implementation w.e.f 2024 admission, subject to reporting to the Academic Council.

7.The modified scheme and syllabus of the Third semester FYUG BSc Computer Science Programme implemented w.e.f 2024 admission are appended with this U.O. and uploaded on the University website.

8.The U.O read (1) above stands modified to this extent

9. Orders are issued accordingly

PREFACE

Welcome to the Four-year Integrated UG Computer Science Programme of Kannur University. The Board of Studies of the University has designed this programme on the basis of the National Education Policy 2023 which critically envisions a brand-new holistic education system for the country, hinging on the effective adoption of modern teaching and training methods, application of technology, and imparting practical and contemporary skills, to shape the overall personality of students. Our programme is designed to equip students with a strong foundation in computer science principles while also providing specialized training in Artificial Intelligence and Machine Learning. In today's digital age, these technologies are at the forefront of technological advancements, driving innovation across various industries including healthcare, finance, transportation, and entertainment.

The Programme in Computer Science is designed with the objective of equipping the students to cope with the emerging trends and challenges in the field of computers and interrelated disciplines like computer engineering, computer science, information systems, information technology, and software engineering. This programme involves various courses such as Value-added courses, Skill enhancement courses, multi-disciplinary courses and ability enhancement courses with an attribution of discipline specific core, discipline specific electives and various scholastic and co scholastic domains. This programme aims at helping the students define and recharge their creative, analytical, problem-solving, and critical thinking abilities, topped by actively pursuing digital literacy.

The BSc Computer Science Honours program emphasizes a strong theoretical foundation complemented by extensive laboratory experience. Students will engage in hands-on experiments that reinforce classroom learning and develop critical technical skills. Through practical work, they will learn to design application programmes, softwares, and analyse data, thus bridging the gap between theory and practice.

For those opting for the BSc Computer Science Honours with Research track, the program offers an enriched experience with a significant focus on independent research. This track is designed for students who wish to delve deeper into specific areas of interest, culminating in a research thesis. Under the mentorship of faculty members, students will undertake original research projects, honing their ability to conduct scientific inquiries, think critically, and contribute to the body of knowledge in Computer Science. This rigorous training prepares graduates for careers in academia, research institutions, and industry.

The successful revision of this curriculum would not have been possible without the collective efforts and inputs from the BOS members, Ad hoc committee members, Computer Science academic council member, resource persons and the unwavering support of Computer Science faculty members from the affiliated colleges. Their dedication and expertise have played an instrumental role in shaping a curriculum that is relevant, up-to-date, and consistent with international scholarly criteria.

We wish you to have a motivating atmosphere to make use of your extreme potential and caliber to complete this programme and to serve the nation by enriching yourself.

BEST WISHES

(BOS, Computer Science)

<u>INTRODUCTION</u>

Kannur University - Four-Year Undergraduate Programme: Backdrop and Context

The implementation of the Four-Year Undergraduate Programme (FYUGP) has been driven by the pressing need to address contemporary challenges ensuring responsive changes to the evolving needs of students, industry, and society at large. Recognizing the curriculum as the cornerstone of any education system, it requires regular refinement to align with evolving socioeconomic factors. Higher education must provide students with practical and technical skills relevant to their fields of interest, necessitating the development of a job-oriented curriculum. Despite significant increases in access and expansion of higher education over the years, concerns persist regarding the quality and relevance of educational outcomes, particularly in terms of employability skills. As the world becomes increasingly interconnected, our education system must evolve to instill 21st-century skills, enabling students not only to survive but to thrive in this dynamic environment. Moreover, there is a growing need for higher education institutions to embrace social responsibility and contribute to the development of a knowledge society capable of driving sustainable development through innovation. With the central objective of fostering a robust knowledge society to support a knowledge economy, the Government of Kerala has initiated steps to reform higher education. Accordingly, three commissions were established to suggest reforms in higher education policy, legal and regulatory mechanisms, and evaluation and examination systems. It is within this context that a comprehensive reform of the undergraduate curriculum has been proposed, leading to the restructuring of the Four-Year Undergraduate Programme (FYUGP).

<u>VISION AND MISSION OF KANNUR UNIVERSITY</u>

Vision:

To establish a teaching, residential and affiliating University and to provide equitable and just access to quality higher education involving the generation, dissemination and a critical application of knowledge with special focus on the development of higher education in Kasargod and Kannur Revenue Districts and the Manandavady Taluk of Wayanad Revenue District.

Mission:

- To produce and disseminate new knowledge and to find novel avenues for application of such knowledge.

- To adopt critical pedagogic practices which uphold scientific temper, the uncompromised spirit of enquiry and the right to dissent.

- To uphold democratic, multicultural, secular, environmental and gender sensitive values as the foundational principles of higher education and to cater to the modern notions of equity, social justice, and merit in all educational endeavours.

- To affiliate colleges and other institutions of higher learning and to monitor academic, ethical, administrative, and infrastructural standards in such institutions.

- To build stronger community networks based on the values and principles of higher education and to ensure the region's intellectual integration with national vision and international standards.

- To associate with the local self-governing bodies and other statutory as well as nongovernmental organizations for continuing education and also for building public awareness on important social, cultural and other policy issues.

PROGRAMME OUTCOME

PO1	**Critical Thinking and Problem-Solving-Apply critical thinking skills to analyze information and develop effective problem-solving strategies for tackling complex challenges.**
PO2	**Effective Communication and Social Interaction-Proficiently express ideas and engage in collaborative practices, fostering effective interpersonal connections.**
PO3	**Holistic Understanding-Demonstrate a multidisciplinary approach by integrating knowledge across various domains for a comprehensive understanding of complex issues.**
PO4	**Citizenship and Leadership-Exhibit a sense of responsibility, actively contribute to the community, and showcase leadership qualities to shape a just and inclusive society.**
PO5	**Global Perspective-Develop a broad awareness of global issues and an understanding of diverse perspectives, preparing for active participation in a globalized world.**
PO6	**Ethics, Integrity and Environmental Sustainability-Uphold high ethical standards in academic and professional endeavors, demonstrating integrity and ethical decision-making. Also acquire an understanding of environmental issues and sustainable practices, promoting responsibility towards ecological well-being.**

PROGRAMME SPECIFIC OUTCOMES

PSO1:	**Apply computer science knowledge to solve diverse real-world Challenges**
PSO2:	**Design and implement robust software solutions using diverse programming languages and design tools**
PSO3:	**Utilize advanced techniques for data storage, retrieval, and manipulation across varied computing environments**
PSO4:	**Critically evaluate and apply information technology tools and methodologies with ethical consideration**
PSO5:	**Engage in interdisciplinary research to address complex computer science challenges**
PSO6:	**Implementation of professional engineering solutions for the betterment of society keeping the environmental context in mind, be aware of professional ethics and be able to communicate effectively.**
PSO7:	**Demonstrate lifelong learning and adapt ability in response to evolving technology trends**

STRUCTURE OF THE PROGRAMME

The Programme of instruction will consist of Lecture courses, Practical courses, comprehensive Viva-voce, Seminar, internship/ industrial visit, and Project work.

1. *Lecture courses***:** Courses involving lectures relating to a field or discipline by a faculty member

2. *Tutorial courses*: Courses involving problem-solving and discussions relating to a field or discipline under the guidance of qualified personnel in a field of learning,

3. *Laboratory work*: A course requiring students to participate in a project or practical or lab activity that applies previously learned/studied principles/theory related to the chosen field of learning, work/vocation, or professional practice under the supervision of an instructor.

4. **Comprehensive Viva-voce** : This is an essential assessment included in the Programme to evaluate the student's grasp of the subject matter and their ability to apply their knowledge as defined in the course outcomes. It also provides an opportunity for the student to engage in academic discussions and receive valuable feedback from experts in the field.

5. *Seminar:* A course requiring students to participate in structured discussion/conversation or debate focused on assigned tasks/readings, current or historical events, or shared experiences guided or led by an expert or qualified personnel in a field of learning

6. *Internship/ Institutional visit :* All students shall undergo a Field Trip/Summer Internship/Apprenticeship in a Firm, Industry or Organization; or Training in labs with faculty and researchers or other Higher Education Institutions (HEIs) or research institutions.

Departments can actively promote internships that can eventually lead to research project work. Institutional visit Incorporating institutional or industrial visits in the Programme brings immense value to the students, making their learning journey more enriching and preparing them for successful careers in Computer science-related fields.

7.   *Research Project:* These students who have opted for the honours with research should complete a research project under the guidance of the mentor and should submit a research report for evaluation. They need to successfully defend the research project to obtain 12 credits under a faculty member of the University/College. The research shall be in the Major discipline

COURSE STRUCTURE

Course and Credit Structure for Different Pathways

Course Distribution for Students in Semesters I – VI

(1) *Single Major*: The 6 courses together in B and C can be in different disciplines.

(2) *Major with Multiple Disciplines*: B and C represent two different disciplines.

(3) *Major with Minor*: B and C represent the same Minor discipline.

I SEMESTER				
Sl No	**Course**	**Hours/Week**	**Credits**	**Total Marks**

Total Credit for Semester 7 and Semester 8			44						
Total Credits from Semester 1 To Semester 8			177 (133+44)						

ASSESSMENT AND EVALUATION

- The assessment shall be a combination of Continuous Comprehensive Assessment (CCA) and an End Semester Evaluation (ESE)

- As per the regulation of Kannur University, one credit corresponds to 25 marks. Hence a 3-credit course must be evaluated for 75 marks and 4 credit courses for 100 marks. The ratio of continuous comprehensive assessment (CCA) to End semester examination (ESE) for theory/lecture courses is 30:70 and for the practical courses, it is 40:60.

- The 4-credit courses (Major and Minor courses) and 3 credit (Foundational Courses) are of two types:
    - (i) courses with only theory
    - (ii) courses with 3-credit theory and 1-credit practical.

- In 4-credit courses with only theory component, out of the total 5 modules of the syllabus, one teacher specific module with 20% content is designed by the faculty member teaching that course, and it is internally evaluated .

- In 4-credit courses with 3-credit theory and 1-credit practical components, out of the total 5 modules of the syllabus, 4 modules are for theory and the fifth module is for practical.

- The 3 credit courses (Foundational Courses) are of two types:
    - (i) courses with only theory
    - (ii) courses with 2-credit theory and 1-credit practical.

- In 3-credit courses with only theory component, out of the total 5 modules of the syllabus, one teacher specific module with 20% content is designed by the faculty member teaching that course, and it is internally evaluated .

- In 3-credit courses with 2-credit theory and 1-credit practical components, out of the total 5 modules of the syllabus, 4 modules are for theory and the fifth module is for practical.

24

• Continuous Evaluation includes assignments, seminars, periodic written examinations, or other measures as proposed in the syllabus and approved by the university.

Practical exams

- • The end-semester practical examination and viva-voce, and the evaluation of practical records shall be conducted by the course in-charge and an internal examiner appointed by the Department Council. Duration of ESE may be 2 to 2.5 Hrs.

- • There shall be a Continuous Evaluation of practical courses conducted by the Course- In-Charge.

- • The process of continuous evaluation of practical courses shall be completed before 10 days from the commencement of the end-semester examination.

- • Those who passed in continuous evaluation alone will be permitted to appear for the end semester examination and viva-voce.

Mark Distribution for Discipline Specific Courses and Foundation Courses

Course Credit	Credit		Mark		L		P		
	L	P	L	P	CCA (30%)	ESE (70%)	CCA (40%)	ESE (60%)	Total marks

	iii	Seminar/ Viva-Voce	5		iii	Record	3	

*   Best out of two test papers

** Or any other evaluation technique like quiz, open book exam, group

activity

INTERNSHIP

- All students should undergo Internship of 2-credits during the first six semesters in a firm, industry or organization, or training in labs with faculty and researchers of their own institution or other Higher Educational Institutions (HEIs) or research institutions.

- Internship can be for enhancing the employability of the student or for developing the research aptitude.

- Internship can involve hands-on training on a particular skill/ equipment/ software. It can be a short project on a specific problem or area. Attending seminars or workshops related to an area of learning or skill can be a component of Internship.

- A faculty member/ scientist/ instructor of the respective institution, where the student does the Internship, should be the supervisor of the Internship.

Guidelines for Internship

- Internship can be in Computer science or allied disciplines.
- There should be minimum 60 hrs. of engagement from the student in the Internship.
- Summer vacations and other holidays can be used for completing the Internship.
- In BSc. Computer science Honours program, institute/ industry visit or study tour can be part of Internship. Visit to national research institute, research laboratory and place of scientific importance should be part of the study tour. A brief report of the study tour has to be submitted with photos.

- The students should make regular and detailed entries in to a personal log book through the period of Internship. The log book will be a record of the progress of the Internship and the time spent on the work, and it will be useful in writing the final report. It may contain experimental conditions and results, ideas, mathematical expressions, rough work and calculation, computer file names etc. All entries should be dated. The Internship supervisor should periodically examine and countersign the log book.

- The log book and the report must be submitted at the end of the Internship.

- The institution at which the Internship will be carried out should be prior-approved by the Department Council of the College where the student has enrolled for the UG Honours program.

Evaluation of Internship

- The evaluation of Internship shall be done internally through continuous assessment mode by a committee internally constituted by the Department Council of the college where the student has enrolled for the UG Honours program.

- The credits and marks for the Internship will be awarded only at the end of semester 6.

The scheme of CCA and ESE is given below:

Components of Evaluation of Internship	Weightage	Marks for Internship 2 Credit/50 Marks
Continuous Comprehensive Assessment (CCA)	30%	15
End Semester Evaluation	70%	35

The detailed distribution table with the components

Evaluation Type		Marks
ESE		**35**
a)	Acquisition of skill	20
b)	Report	15
CCA		**15**
a)	Punctuality	5
c)	Logbook	10
Total		**75**

PROJECT IN HONOURS PROGRAMME

- In Honours programme, the student has the option to do a Project of 12-credits in Major instead of three major Courses or Project of 8-credits in Major and one major course in semester 8.

- The Project can be done in the same institution/ any other higher educational institution (HEI) / research centre/ training centre.

- The Project in Honours programme can be a short research work or an extended internship or a skill-based training programme.

- A faculty member of the respective institution, where the student does the Project, should be the supervisor of the Project.

PROJECT IN HONOURS WITH RESEARCH PROGRAMME

- Students who secure 75% marks and above (equivalently, CGPA 7.5 and above) cumulatively in the first six semesters are eligible to get selected to Honours with Research stream in the fourth year.

- In Honours with Research programme, the student has to do a mandatory Research Project of 12-credits instead of three Core Courses in Major in semester 8.

- The number of seats for the Honors with research shall be determined as per the availability of eligible faculty.

- The selection criteria for Honors with research stream shall be in accordance with the guidelines of UGC or as approved by Kannur University.

- Students who have chosen the honours with research stream shall be mentored by a faculty with a PhD.

- The mentor shall prescribe suitable advanced-level courses for a minimum of 20 credits to be taken within the institutions along with the papers on research methodology, research ethics, and research topic-specific courses for a minimum of 12 credits which may be obtained either within the institution or from other recognized institutions, including online and blended modes.

- These students who have opted for the honours with research should complete a research project under the guidance of the mentor and should submit a research report for evaluation. They need to successfully defend the research project to obtain 12 credits under a faculty member of the University/College within the University.

- The research outcomes of their project work may be published in peer-reviewed journals or presented at conferences or seminars or patented.

Guidelines for the Project in Honours Programme and Honours with Research Programme

- Project can be in Computer science or allied disciplines.

- Project should be done individually.

- Project work can be of experimental/ theoretical/ computational in nature.

- There should be minimum 360 hrs. of engagement from the student in the Project work in Honours programme as well as in Honours with Research programme.

- There should be minimum 13 hrs./week of engagement (the hours corresponding to the three core courses in Major in semester 8) from the teacher in the guidance of the Poject(s) in Honours programme and Honours with Research programme.

- The various steps in project works are the following:

- ⎸Review

- Investigation on a problem in systematic way.

- Systematic recording.

- Reporting the results with interpretation in a standard documented form.

- Presentation of the results before the examiners.

- The report must be submitted at the end of the Project. A copy of the report should be kept for reference at the department. A soft copy of the report too should be submitted, to be sent to the external examiner in advance.

- The project report shall have an undertaking from the student and a certificate from the research supervisor for originality of the work, stating that there is no plagiarism, and that the work has not been submitted for the award of any other degree/ diploma in the same institution or any other institution.

Evaluation of Project

- The evaluation of Project will be conducted at the end of the eighth semester by both internal and external modes.

- The internal evaluation of the Project work shall be done through continuous assessment mode by a committee internally constituted by the Department Council of the college where the student has enrolled for the UG Honours programme. 30% of the weightage shall be given through this mode.

- The remaining 70% shall be awarded by the external examiner appointed by the University.

The scheme of evaluation of the Project is given below:

Project type	Maximum Marks	CCA (30%)	ESE (70%)
Research Project of 12 Credits (UG Honours with research, mandatory)	300	90	210
Research Project of 12 Credits (UG Honours, optional)	300	90	210
Research Project of 8 Credits (UG Honours, optional)	200	60	140

The detailed distribution table with the components

	CCA		
Sl. No	Components of Evaluation of Project	Marks for the Project (Honours/Honours with Research) 12 credits	Marks for the Project (Honours/Honours with Research) 8 credits
1	Skill in doing project work	30	20
2	Internal Presentation and Viva-Voce	20	15
3	Punctuality and attendance*	20	15
4	Organization of Project Report	20	10
	Total Marks	**90**	**60**

*Attendance certificate should be produced by the students who have done their projects in any higher educational institution (HEI)/ research centre/ training centre.

		ESE	
Sl. No	Components of Evaluation of Project	Marks for the Project (Honours/ Honours with Research) 12 credits	Marks for the Project (Honours/ Honours with Research) 8 Credits
1	Content and relevance of the Project, Methodology, Quality of analysis, and Innovations of Research	50	40
2	Presentation of the Project	50	30
3	Project Report	40	20
4	Viva-Voce	70	50
	Total Marks	**210**	**140**

EXTERNAL EVALUATION

- Examinations will be conducted at the end of each semester. The students can write the external examinations in Computer science in both English and Malayalam languages.

- Individual questions are evaluated in marks and the total marks are converted into grades by the University based on 10-point grading system.

Letter Grade	Grade Point (P)
O (Outstanding)	10
A+ (Excellent)	9

A (Very Good)	8
B+ (Good)	7
B (Above Average)	6
C (Average)	5
P (Pass)	4
F (Fail)	0
Ab (Absent)	0

- A minimum of grade point 4 (Grade P) is needed for the successful completion of a Course.

- A student who has failed in a Course can reappear for the End Semester Examination of the same Course along with the next batch without taking re-admission or choose another Course in the subsequent Semesters of the same programme to acquire the minimum credits needed for the completion of the Programme.

- There shall not be provision for improvement of CE and ESE.

- A student who has successfully completed the CE requirements in a subsequent semester can also appear for the ESE subject to the maximum duration permitted.

Computation of SGPA and CGPA

The following method is recommended to compute the Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA):

- The SGPA is the ratio of the sum of the product of the number of credits with the grade points scored by a student in all the courses taken by a student and the sum of the number of credits of all the courses undergone by a student, i.e. **SGPA** $(S_i) = \Sigma(C_i \times G_i) / \Sigma C_i$ Where C_i is the number of credits of the course and G_i is the grade point scored by the student in the course.

Example:

Semester	Course	Credit	Letter Grade	Grade point	Credit Point (Credit x Grade)
I	Course 1	3	A	8	3 X 8 = 24
I	Course 2	4	B+	7	4 X 7 = 28
I	Course 3	3	B	6	3 X 6 = 18
I	Course 4	3	O	10	3 X 10 = 30
I	Course 5	3	C	5	3 X 5 = 15
I	Course 6	4	B	6	4 X 6 = 24
		20			139
SGPA					139/20=**6.95**

- The Cumulative Grade Point Average (CGPA) is also calculated in the same manner taking into account all the courses undergone by a student over all the semesters of a programme, i.e. $CGPA = \Sigma(C_i \times S_i) / \Sigma C_i$ Where S_i is the SGPA of the semester and C_i is the total number of credits in that semester.

- The SGPA and CGPA shall be rounded off to 2 decimal points and reported in the transcripts. Transcript (Format): Based on the above recommendations on Letter grades, grade points and SGPA and CCPA, the HEIs may issue the transcript for each semester and a consolidated transcript indicating the performance in all semesters.

Example:

Semester I	Semester II	Semester III	Semester IV	Semester V	Semester VI

Credit: 21	Credit: 21	Credit: 22	Credit: 24	Credit: 23	Credit: 22
SGPA: 6.9	SGPA: 7.8	SGPA: 5.6	SGPA: 6.0	SGPA: 6.3	SGPA: 8.0

CGPA=(21 x 6.9 + 21 x 7.8 + 22 x 5.6 + 24 x 6.0 + 23 x 6.3 + 22 x 8.0) / 133 = 6.74

- The SGPA is the ratio of the sum of the product of the number of credits with the grade points scored by a student in all the courses taken by a student and the sum of the number of credits of all the courses undergone by a student, i.e. **SGPA** $(Si) = \Sigma(Ci \times Gi) / \Sigma Ci$ Where Ci is the number of credits of the course and Gi is the grade point scored by the student in the course.

CGPA	Overall letter Grade
9.5 and above	**O**
8.5 and above but less than 9.5	A+
7.5 and above but less than 8.5	A
6.5 and above but less than 7.5	B+
5.5 and above but less than 6.5	B
4.5 and above but less than 5.5	C
4.0 and above but less than 4.5	D
Less than 4.0	F

Appearance for Continuous Evaluation (CE) and End Semester Examination (ESE) are compulsory, and no Grade shall be awarded to a candidate if the candidate is absent for CE or ESE or both.

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE** :Basic components of the system	
	1	**Introduction to Computers:** Definition and Characteristics of Computers, Brief History and Evolution of Computers. Computer System Overview, Basic Components of a Computer System - Input, Output, Processing, and Storage.	9
	2	**Central Processing Unit (CPU):** Basic Concepts of CPU, Architecture of a CPU - ALU, Registers, and Control Unit.	
	3	**System Memory and Storage:** Memory Hierarchy - An Overview, Primary Memory - RAM (Random Access Memory) and ROM (Read Only Memory) - Types and Functions, Secondary Memory - Hard Drives, SSDs, USB Drives Introduction to Cache Memory - Purpose and Basic Functioning.	

| 2 | **MODULE TITLE** : Data representation | |

			9
	1	**Introduction to Data Representation:** Decimal, Binary, Hexa Decimal and Octal Number Systems, Conversion Between Number Systems. Conversion between Number system	
	2	**Binary Arithmetic and Complements:** Binary addition, subtraction, Complements of Binary Numbers (1's Complement and 2's Complement).	
	3	**Special Codes and Unicode:** Binary Coded Decimal (BCD), Grey code, ASCII Code, Unicode	

3		MODULE TITLE : Types of software	
	1	**Introduction to Software:** Types of Software - Application software, System Software, Operating Systems - Basics Function, examples.	9
	2	**Software Licensing and Acquisition:** Retail, OEM, Demo, Shareware, Freeware, Open-Source Software.	
	3	**Programming Languages:** Types, Basic Concepts of Compiler, Assembler, Interpreter, Linker and Loader, Source code and Object code.	

4		MODULE TITLE :Basics of computer networks	
	1	**Introduction to Computer networks:** Data Communication System and Its Components, advantages of networking., hardware components of networking-Transmission modes-Simplex- half duplex-full duplex	
	2	Classification of networks-LAN, MAN, WAN, internet. Network topologies-Bus, Star, Ring and Mesh. Internet applications. Introduction to the term web, web browsers, http/https, URL, Domain name.	9

5	Teacher Specific Module	

41

Directions	
Identify various network devices and make notes on them Hands on exercise on installing operating system.	9

Course Description:

This course introduces students to the fundamental concepts of databases and their design. It covers various aspects of database management systems (DBMS), including relational database concepts, database design principles, and database management. Students will learn to design and implement databases using SQL and ER modeling techniques. The course also explores advanced topics such as database administration, security, and emerging trends in databases.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Discuss the importance of databases and their applications	U
2	Design relational databases using SQL.	U, A

3	Understand the concept of normalization techniques in database design.	U, A
4	Identify various security, backup, and recovery strategies to manage databases effectively.	U, A

Sample Questions to test Outcomes.

1. What is a database, and why are databases important in modern information systems?
2. How does a database management system (DBMS) help in managing data?
3. Create a SQL query to create a new table named "Students" with columns for ID, Name, and Age.
4. Write a SQL query to insert a new record into the "Students" table.
5. Explain the concept of normalization in database design. Why is it important?
6. Describe the importance of database security. What are some common security measures for databases?

Employability for the Course / Programme:

Completion of the "Database Concepts and Design" course equips students with fundamental skills in designing and managing relational databases using SQL. Through practical exercises and projects, students learn to analyze data requirements, optimize database design, and ensure data security and integrity. With these skills, graduates are well-prepared for roles in database administration, data analysis, and database development across diverse industries.

47

KU1MDCSC103: DIGITAL MARKETING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours

Course Description:

In today's digital age, mastering the art of digital marketing is crucial for businesses to thrive. This course provides a comprehensive understanding of the core principles and strategies involved in promoting a brand or product online. Students will explore various digital channels, gain hands-on experience with essential tools, and develop the skills to create and manage effective digital marketing campaigns

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Locate the digital marketing landscape and its impact on consumer behavior.	U, An
2	Implement a comprehensive digital marketing strategy aligned with business objectives.	U, A

48

3	Utilize various digital channels (SEO, SEM, SocialMedia, Email Marketing) to reach target audiences effectively.	U, E
4	Design engaging content that resonates with target audiences and drives conversions.	U, A, C
5	Discuss campaign performance using key metrics and data insights.	U, An

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

2		MODULE 2: Content Marketing & SEO	
	1	Content Strategy & Development - Creating Engaging Content Across Channels	9
	2	Search Engine Optimization (SEO) Principles - Optimizing Websites for Search Visibility	
	3	Keyword Research & Content Planning for Improved Ranking	
	4	Content Marketing Platforms and Tools	

3		MODULE 3: Social Media Marketing & Paid Advertising	
	1	Social Media Marketing Strategies - Building Brand Communities on Key Platforms	9
	2	Engaging Content Creation for Social Media Channels	
	3	Paid Advertising Fundamentals - Introduction to PPC (Pay-Per-Click) Advertising	
	4	Social Media Advertising Platforms and Campaign Management	

4		MODULE 4: Email Marketing & Analytics	
	1	Effective Email Marketing Strategies - Building Email Lists and Segmentation	9
	2	Crafting Compelling Email Campaigns - Design & Copywriting Techniques	
	3	Email Marketing Automation Tools and Best Practices	
	4	Data Analysis for Digital Marketing - Key Performance Indicators (KPIs) & Tracking Tools	

5		Teacher Specific Module	
		Directions	

Essential Readings:

1. Digital Marketing for Dummies
Author: Ryan Deiss & Russ Henneberry
Published Year: 2020 (2nd Edition)
- **Relevance**: Covers foundational topics, content marketing, SEO, social media, email marketing, and analytics in a practical and beginner-friendly way.

2. Marketing 5.0: Technology for Humanity
Author: Philip Kotler, Hermawan Kartajaya & Iwan Setiawan
Published Year: 2021
- **Relevance**: Explores customer behavior in the digital age and how modern technology influences marketing strategies and segmentation.

3. SEO 2023: Learn Search Engine Optimization with Smart Internet Marketing Strategies
Author: Adam Clarke
Published Year: 2023
- **Relevance**: Offers detailed insights into SEO principles, keyword research, content optimization, and Google ranking factors.

4. Email Marketing Rules: A Step-by-Step Guide to the Best Practices that Power Email Marketing Success
Author: Chad S. White
Published Year: 2017 (3rd Edition)
- **Relevance**: Dedicated to email marketing, segmentation, automation, copywriting, and measurement strategies.

5. Social Media Marketing: A Strategic Approach
Author: Melissa Barker, Donald Barker, Nicholas Bormann & Krista Neher
Published Year: 2022 (3rd Edition)
- **Relevance**: Comprehensive guide on social media strategy, content creation, community building, and paid campaign management.

E-resources (websites/weblinks):

1. **HubSpot Academy & Blog**
   o **Website:** https://academy.hubspot.com/ and https://blog.hubspot.com/
   o **Relevance to Syllabus:** HubSpot is a leading authority in inbound marketing.
     - **Module 1:** Their academy offers free courses and certifications on digital marketing fundamentals, understanding customer behavior, developing buyer personas, and setting goals. Their blog consistently publishes articles on these topics.
     - **Module 2:** Extensive resources on content strategy, creation, SEO, and keyword research.
     - **Module 3:** Covers social media marketing strategies and creating engaging content. While less focused on the granular details of paid advertising platforms, it provides strategic context.

▪ **Module 4:** Strong on email marketing strategies, list building, segmentation, and crafting compelling campaigns. They also touch upon marketing analytics.

2. **Google Digital Garage & Google's Search Central (formerly Google Webmasters)**
   o **Websites:** https://learndigital.withgoogle.com/digitalgarage/ and https://developers.google.com/search/
   o **Relevance to Syllabus:**
      ▪ **Google Digital Garage (Module 1, 3, 4):** Offers a wide range of free courses, including a comprehensive "Fundamentals of Digital Marketing" certification (in partnership with IAB Europe) that covers the basics, search, social media, email, and analytics. It's excellent for understanding the landscape, setting goals, and getting an overview of paid advertising (especially Google Ads).
      ▪ **Google's Search Central (Module 2):** This is the definitive source for understanding Google's SEO best practices, how crawling and indexing work, keyword research considerations from Google's perspective, and technical SEO. It's essential for 2.2 (SEO Principles) and 2.3 (Keyword Research).

3. **Moz Blog & Learning Center**
   o **Website:** https://moz.com/blog and https://moz.com/learn/seo
   o **Relevance to Syllabus:** Moz is a highly respected name in the SEO industry.
      ▪ **Module 1 & 4 (partially):** While primarily SEO-focused, their blog often discusses broader digital marketing strategy and the importance of measurement.
      ▪ **Module 2:** This is where Moz shines. Their blog and Learning Center are invaluable resources for everything related to SEO, including principles, keyword research, content planning for ranking, and understanding SEO tools (like their own). They cover both foundational and advanced SEO concepts.

KU2MDCCSC104: FUNDAMENTALS OF WEB TECHNOLOGY

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
2	MDC	100-199	KU2MDCCSC104	3	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	0	-	25	50	75	1.5hrs.

Course Description:

This course provides a comprehensive introduction to web technologies. Students will learn the basics of the World Wide Web, HTML, CSS, and JavaScript, focusing on practical skills and real-world applications. By the end of the course, students will be able to create and design basic web pages, apply styling and layout techniques, and add interactivity using client-side scripting.

Course Prerequisite: NIL
Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Examine the architecture and evolution of the internet and the World Wide Web.	U
2	Design well-structured HTML documents with appropriate elements and attributes.	U, C
3	Apply CSS to style text, colors, backgrounds, and layout elements effectively.	U, A
4	Apply JavaScript to implement dynamic behaviour and interactivity on web pages.	U, A

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE 1: Introduction to the World Wide Web**	
	1	Overview of the internet and its evolution	12
	2	Introduction to the World Wide Web (WWW) and its components	
	3	Client-side scripting versus server-side scripting	
	4	Role of web technologies in various disciplines	

2		**MODULE 2: Introduction to HTML**	
	1	Origins and Evolution of HTML	12
	2	HTML elements and attributes	
	3	Basic structure of an HTML document	
	4	Creating hyperlinks , images, lists ,tables and forms	

3		**MODULE 3: CSS Fundamentals**	
	1	Introduction to CSS	12
	2	CSS syntax and selectors	
	3	Styling text, colors, and backgrounds	
	4	Box model and layout techniques	

4		**MODULE 4: Client-Side Scripting with JavaScript**	
	1	Introduction to JavaScript	12
	2	JavaScript variables, data types, and operators	
	3	Dialog boxes: Alert, confirm and prompt dialog boxes	
	4	Functions and events	

5		**Teacher Specific Module**	

Provide practical oriented sessions including following activities	
Lab exercise 1. Implement basic tags in HTML 2. Implement various heading tags 3. Implement img tag with attributes 4. Implement listing tags 5. Implement table tag 6. Implement form tag with its elements and attributes 7. Implement various types of CSS 8. javascript programme to implement data types and operators 9. implement dialog boxes in java script 10. java script programme to implement event handling	12

Essential Readings:

1. Paul Deitel, Harvey Deitel& Abbey Deitel, Internet and World Wide Web: How to Program, Pearson, Fifth Edition, 2016.

2. Powell, Thomas A. HTML & CSS: The Complete Reference. McGraw Hill Education;

3. Javascript-Definitive Guide O'reilley 7th edn

4. https://www.w3schools.com5.https://javascript.info

Suggested Readings:

1. Julie C. Meloni, HTML and CSS in 24 Hours, Sams Teach Yourself (Updated for HTML5 and CSS3), Ninth Edition
2. CSS Secrets: Better Solutions to Everyday Web Design Problems" by Lea Verou
3. JavaScript and JQuery: Interactive Front-End Web Development" by Jon Duckett
4. https://www.internetsociety.org/internet/history-internet/
5. https://developer.mozilla.org/en-US/docs/Web/HTML

Assessment Rubrics:

Evaluation Type		Marks
End Semester Evaluation		**50**
Continuous Evaluation		**25**
a)	Test Paper- 1	5
b)	Test Paper-2	10

57

c)	Assignment	5
d)	Seminar	5
e)	Book/ Article Review	
f)	Viva-Voce	
g)	Field Report	
	Total	**75**

SAMPLE QUESTIONS TO TEST OUTCOMES:

7. Describe the evolution of the internet and its impact on society.

8. Provide examples of how web technologies are used in different disciplines.

9. List and explain the basic elements and attributes of HTML.

10. Create a simple HTML document with hyperlinks, images, lists, tables, and forms.

11. Define CSS and its role in web development.

12. Demonstrate how to style text, colors, and backgrounds using CSS.

13. What is JavaScript and how does it differ from HTML and CSS?

14. Describe JavaScript variables, data types, and operators.

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE 1 : Creating a google account and accessing related services**	
	1	Overview of Information Technology and its Tools: Basic concepts and terminology related to IT tools and their role in supporting business operations and personal productivity.	12
	2	Google Essentials: Introduction to Google Services Overview of Google Workspace, Creating and managing a Google account, Navigating the Google interface	
	3	Gmail for Communication: Managing emails in Gmail, Organizing and labelling emails, Using filters and settings effectively	
	4	Google Drive for File Management, Uploading and organizing files in Google Drive, Collaborative document editing and sharing, Version history and document recovery	
2		**MODULE 2: Word Processing Techniques**	
	1	Text Creation and manipulation, Document Creation, Editing Text, Text Selection, Cut, Copy and Paste, Font, Color, Style and Size selection, Alignment of Text, Undo & Redo, AutoCorrect, Spelling & Grammar, Find and Replace.	12
	2	Table Manipulation, Insert & Draw Table, changing cell width and height, Alignment of Text in cell, Delete / Insertion of Row, Column and Merging & Splitting of Cells, Border and Shading,	
	3	Mail Merge, Table of Contents, Indexes, Adding Comments, tracking changes, Macros, Creating Headers, Footers, and Page Numbers	
	4	Formatting the Text, Creating and using user defined Styles, Paragraph Indentation, Bullets and Numbering, change case, Header & Footer, Page Setup, Page Layout, Borders, Using the Help, Watermark, Print Preview, Printing of Documents, PDF file and Saving a Document as PDF file.	
	5	Text Creation and manipulation, Document Creation, Editing Text, Text Selection, Cut, Copy and Paste, Font, Color, Style and Size selection, Alignment of Text, Undo & Redo, AutoCorrect, Spelling & Grammar, Find and Replace.	
3		**MODULE 3: Introduction to Spreadsheets**	

	1	Concept of Cell Address: [Row and Column] and selecting a Cell, Entering Data [text, number, date] in Cells, Page Setup, Printing of Sheet, Saving Spreadsheet, Opening and Closing	12
	2	Manipulation of Cells & Sheet, Modifying / Editing Cell Content, Formatting Cell (Font, Alignment, Style), Cut, Copy, Paste & Paste Special, Changing Cell Height and Width, Inserting and Deleting Rows, Column, AutoFill, Sorting & Filtering, Freezing panes	
	3	Formulas, Functions a) Formulas for Numbers b) AutoSum functions c) Logical Functions d) Text Functions e) Statistical Functions Date & Time Functions	
	4	Creating Charts and Graphs, Working with Large Datasets - Filtering & Sorting, Data Analysis Tools (e.g., PivotTables), Creating Macros and Automation	
	5	Google Sheets for Data Management: Introduction to Google Sheets for spread sheets, Data entry, formatting, and basic formulas, Collaborative data analysis and sharing	

4		**MODULE 4:** Creating a Presentation	
	1	Creating a Presentation Using a Template, Creating a Blank Presentation, Inserting & Editing Text on Slides, Inserting and Deleting Slides in a Presentation, Saving a Presentation	12
	2	Inserting Table, Adding Pictures, Inserting Other Objects, Resizing and Scaling an Object Creating & using Master Slide.	
	3	Choosing a Set Up for Presentation, Playing a Slide Show, Transition and Slide Timings, Automating a Slide Show, Providing Aesthetics to Slides & Printing	
	4	Enhancing Text Presentation, Working with Color and Line Style, Adding Movie and Sound, Adding Headers, Footers and Notes, Printing Slides and Handouts	
	5	Google Slides for Presentations: Creating and designing, presentations in Google Slides, Collaborative editing and commenting, Adding multimedia elements	

5		**Teacher Specific Module**

Provide practical oriented classes including following exercise.	
1. Document creation using word processor tool 2. Create a banner for college union inauguration 3. Create a biodata with your photo 4. Implement mail merge technique in word processor 5. Program to implement aggregate functions in spreadsheet 6. Perform result analysis using different types of charts	12

KU2MDCCSC106: INTRODUCTION TO DATA SCIENCE

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
2	MDC	100-199	KU2MDCCSC106	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	0	-	25	50	75	1.5 hrs

Course Description:

This course introduces the fundamental concepts, techniques, and tools used in data science. Students will learn how to collect, clean, analyze, and visualize data using various programming languages and libraries. The course will cover topics such as data manipulation, exploratory data analysis, statistical modeling, machine learning, and data visualization.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Understand various data structures in in Python for data storage.	U
2	Identify various machine learning algorithms and real-world datasets for problem solving	U, A

| 3 | Identify data characteristics and patterns through exploratory data analysis (EDA). | U |
| 4 | Demonstrate proficiency to collect, clean, and preprocess data using Python and relevant libraries. | U, A |

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE 1 : Introduction to Data Science**	
	1	Overview of data science and its applications	9
	2	Introduction to Python programming for data science	
	3	Introduction to data types (text, numeric, sequence, mapping,) and libraries (NumPy, Pandas)	
	4	Data collection methods and sources	
2		**MODULE 2 : STEPS IN DATA ANALYTICS**	
	1	Define the Problem or Research Question- Collect Data- types of data(structured and un structured data)-Various data collection methods	

64

	2	Data Cleaning process of data cleaning - Analyzing the Data and tools used for data analysis	9
	3	Data visualization techniques- tools used for data visualization	
	4	Presentation of data- techniques to present data	

3	**MODULE 3: Machine Learning Fundamentals**		
	1	Introduction to machine learning	9
	2	Supervised vs. unsupervised learning	
	3	Model evaluation and validation	
	4	Regression analysis (linear regression, multiple regression)	
	5	Classification algorithms (logistic regression, decision trees)	

4	**MODULE 4:** VISUALIZATION AND MATPLOTLIB		
	1	Basic functions of matplotlib-Simple Line Plot,	9
	2	Scatter Plot-Histograms- Legends, Color Bars- Three Dimensional Plotting in Matplotlib.	
	3	**Ethics and Privacy**: Understand the ethical implications of data science.	
	4	Learn about privacy concerns and responsible data use.	

5	**Teacher Specific Module**	
	Directions	
	1. Conduct data analysis of students performance in the institution 2. Data analysis of library management with visual plots	9

Essential Readings:

65

1. "Introduction to Data Science", Jeffrey Stanton, Chapman and Hall/CRC in 2013.

2. **"Data Science from Scratch: First Principles with Python", Joel Grus, O'Reilly Media.**

3. **"Python for Data Analysis", Wes McKinney, O'Reilly Media**

Suggested Readings:

1. "Data Science for Business: What You Need to Know about Data Mining and DataAnalytic Thinking", Foster Provost and Tom Fawcett, O'Reilly Media, 1st Edition (2013)

KU3VACCSC103: DATA ANALYTICS USING R

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
3	VAC	100-199	KU3VACCSC103	3	60

Learning Approach (Hours/ Week)	Marks Distribution	Duration of ESE (Hours)

Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
2	2		25	50	75	1.5 hrs.

Course Description:

This course is an introduction to data analytics using the free and open-source software R.

The course helps to learn about the basics of exploratory and descriptive data analysis. The topics like obtaining, cleaning, combining, and wrangling the data into a more usable form. We will learn how to break up a large dataset into manageable pieces and then use a variety of quantitative and visual tools to summarize and learn about it.

Course Prerequisite: Basics of Statistics
Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Identify the fundamentals, standards of Functions and capabilities of R Language.	U
2	Understand the basic structure of R programming including datatypes, variables,	U
3	Design programs using various data structures in R	A
4	Understand data visualization using R	U/An
5	Understand the concept of regression in data analysis	

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

M O D U L E	U N I T	DESCRIPTION	HOURS
1		**MODULE TITLE: Introduction to R.**	12
	1	Importance and applications of R programming	
	2	Basic Syntax-Comments-Operators-Keywords-Data Types **Variables-**Introduction to Variables-Scope of Variable-Dynamic Scoping-Lexical Scoping	
	3	**Input and Output-**Taking Input from User-Printing Output of R Program-Print the Argument to the Screen – print() Function	
	4	**Data Structures-** Vectors- Operations on Vectors-Append Operation on Vectors-Dot Product of Vectors-Types of Vectors	

2		**MODULE TITLE: Datastructures**	12
	1	Introduction to Lists-Two Dimensional List-Operations on Lists List of Vectors-List of Dataframes-Named List	
	2	Matrices -Create Matrix from Vectors-Operations on Matrices-Matrix Multiplication-Algebraic Operations on a Matrix-Combining Matrices	
	3	Dataframe - Matrix vs Dataframe-DataFrame Operations-DataFrame Manipulation-Joining of Dataframes Arrays- Introduction to Arrays -Multidimensional Array-Array Operations-Sorting of Arrays	
	4	Introduction to Control Statements-Loops (for, while, repeat)-syntax and sample programs	

3		**MODULE TITLE : Data Visualization And Data Analysis**	12
	1	Customize plot axes, labels, add legends, and add colors.	
	2	Probability Distributions, Normal Distribution- Binomial Distribution	

79

	3	Poisson Distributions , Basic Statistics, Correlation and Covariance, TTests,-ANOVA.	
	4	Analysis of Variance and Correlation	

4	**MODULE TITLE : linear Regression**		12
	1	Regression	
	2	Case Study : Predict the Quality of products using Linear Regression	
	3	Feature Selection and Shrinkage Methods	
	4	LASSO, Ridge Regression	

5	**Teacher Specific Module**	
	Lab list	
	- Write an R Program to Add Two Vectors - Find the Sum, Mean, and Product of the Vector in R Programming - Create an R Program to Take Input From the User - How to Generate Random Numbers from Standard Distributions in R - Create an R Program to Find the Minimum and Maximum - R Program to Sort a Vector - How to Find the Factorial of a Number	12
	- How to create R Multiplication Table - Write an R Program to Check Prime Number - R Program to Check for Leap Year - Check if a Number is Odd or Even in R Programming - R Program to Calculate Simple Interest - R Program to Convert Celsius to Kelvin and Fahrenheit - R Program to Calculate the Area of a Triangle - R Program to Convert Decimal to Binary, Octal, and Hexadecimal	

Essential Readings:

1. The Art of R Programming, Norman Matloff, Cengage Learning: Efficient R Programming: A Practical Guide to Smarter Programming 1st Edition - Colin Gillespie & Robin Lovelace - First Edition.

2. 2. Jared P. Lander, R for Everyone: Advanced Analytics and Graphics, Second Edition 2017.

KU4VACCSC104: ETHICAL HACKING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
4	VAC	100-199	KU4VACCSC104	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	0		25	50	75	1.5 /hrs.

Course Description:

This course introduces students to the field of ethical hacking, focusing on techniques used to secure information systems. Students will learn about different types of hackers, threats, and vulnerabilities. They will also gain hands-on experience with tools and methodologies used in ethical hacking, including information gathering, foot printing, scanning, enumeration, password cracking, privilege escalation, and system hacking. Legal and ethical aspects of ethical hacking will also be covered to ensure responsible and lawful use of hacking techniques.

Course Prerequisite: NIL Course
Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Discuss the fundamental concepts of ethical hacking, including its principles and methodologies.	U

2	Demonstrate proficiency in using various ethical hacking tools and techniques for information gathering, scanning, and enumeration.	A
3	Use ethical hacking principles to identify and exploit vulnerabilities in systems and networks.	A
4	Judge on legal and ethical considerations in ethical hacking practices.	E

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**INTRODUCTION TO ETHICAL HACKING**	9
	1	**Introduction to ethical hacking**	
		a) Hacker types	
		b) Threats and attacks, Vulnerabilities	
	2	**Terminologies in hacking**	
		a) Black Hat, White Hat, and Grey Hat Hackers, Exploit, Phishing, Malware	
	3	**Ethics and laws in hacking**	
		a) Ethical principles in hacking	
		b) Legal implications and laws related to hacking, International cybersecurity laws and regulations	

	4	Need of Ethical hacking, Roles and responsibilities.	
		a) Importance of ethical hacking in cybersecurity	
		b) Roles of ethical hackers in organizations	
		c) Responsibilities and code of conduct for ethical hackers	

2		**INFORMATION GATHERING AND RECONNAISSANCE**	
	1	Information Gathering : Information gathering techniques	9
	2	Foot printing and reconnaissance: definitions and techniques	
	3	Tools and methodologies for information gathering	
	4	Legal and ethical considerations	

3		**SCANNING AND ENUMERATION**	
	1	**Scanning Techniques**: Port Scanning Techniques, Vulnerability Scanning, Network Mapping	9
	2	**Enumeration Methods**	
		a) Service Enumeration	
		b) Enumerating Systems	
		c) Enumerating Services	
	3	**Advanced Enumeration Techniques**: SNMP Enumeration, NetBIOS Enumeration, LDAP Enumeration	

4		**EXPLOITATION AND POST-EXPLOITATION**	
	1	**Password Cracking Techniques**	9
		a) Techniques for cracking passwords, Tools for password cracking, Countermeasures against password cracking	
	2	**Privilege Escalation**	
		a) Methods for privilege escalation, Techniques for exploiting vulnerabilities.	
		b) Executing applications: Methods for executing applications, Remote code execution, Persistence techniques	
	3	**Hacking Operating Systems, Trojans, and Backdoors**	

84

		a) Techniques for hacking operating systems, Understanding and using Trojans, Creating and deploying backdoors, Detection and prevention strategies.	

5	Teacher Specific Module	
	SMTP/Email-based attacks, VOIP vulnerabilities, Directory traversal, Windows Active Directory and common Attacks	
	Netcat Trojan, Wrapping definition, Reverse engineering.	9

Essential Readings:

1. The Basics of Hacking and Penetration Testing: Ethical Hacking and Penetration Testing Made Easy , Patrick Engebretson

2. Gray Hat Hacking: The Ethical Hacker's Handbook, Allen Harper, Daniel Regalado, Ryan Linn, Stephen Sims, Branko Spasojevic, and Linda Martinez.

3. Penetration Testing: A Hands-On Introduction to Hacking" by Georgia Weidman

4. Certified Ethical Hacker Study Guide v9, Sean-Philip Oriyano, Sybex; Study Guide Edition,2016
5. CEH official Certified Ethical Hacking Review Guide, Wiley India Edition, 2007

Suggested Readings:

1. Metasploit: The Penetration Tester's Guide" by David Kennedy, Jim O'Gorman, Devon Kearns, and Mati Aharoni

2. The Hacker Playbook 3: Practical Guide To Penetration Testing, Peter Kim

KU4VACCSC105 INTELLECTUAL PROPERTY RIGHTS

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
4	VAC	100-199	KU4VACCSC105	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	0		25	50	75	1.5hrs.

Course Description:

86

This course provides a comprehensive introduction to Intellectual Property Rights (IPR), covering the fundamental concepts, types of intellectual property, legal framework, management strategies, and emerging issues. Students will explore the origins of intellectual property, its significance in modern society, and the impact of IPR on innovation, creativity, and economic development. Through case studies and discussions, students will gain practical insights into the application of IPR in various industries and the importance of ethical considerations in intellectual property management.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Discuss the concept of intellectual property, its historical development, and its role in fostering innovation and creativity.	U
2	Identify and differentiate between various types of intellectual property, including patents, copyrights, trademarks, and trade secrets.	U
3	Examine the legal framework for intellectual property rights at national and international levels, including key treaties and agreements.	An
4	Develop strategies for managing intellectual property, including IP policy development, licensing, technology transfer, and valuation.	C
5	Appraise emerging issues in intellectual property law, such as opensource software, and their implications for IP protection and enforcement.	E

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

MODULE	UNIT	DESCRIPTION	HOURS
1		**INTRODUCTION TO IPR**	9
	1	**Introduction to IPR**	
		a) Meaning of property, origin, nature	
		b) Meaning of Intellectual Property Rights.	
	2	**Types of Intellectual Property**	
		a) Patents, copyrights, trademarks, and trade secrets	
	3	**Legal Framework for IPR**	
		a) National and International IP Laws	
		b) Role of WIPO (World Intellectual Property Organization), TRIPS Agreement	
	4	**IP Management and Policy**	
		a) IP Strategy and Management, IP Policy Development	
		b) Licensing and Technology Transfer	
		c) IP Valuation and Commercialization	

MODULE	UNIT	DESCRIPTION	HOURS
2		**PATENTS AND INDUSTRIAL DESIGNS**	
	1	Patents: Origin, meaning of patent, types.	9
	2	Criteria for Patentability	
	3	Patent Application Process	
	4	Patent Infringement and Remedies	
	5	Rights and Limitations of Patent Holders	

MODULE	UNIT	DESCRIPTION	HOURS
3		**TRADEMARKS AND COPYRIGHTS**	
	1	**Trademark Law:** Concepts, registration process, and infringement.	9
	2	**Copyright Law**	
		a) Basics, protection	
		b) fair use	

		c) digital rights management.	
	3	Rights and Limitations of Trademark and Copyright Owners	

4		**TRADE SECRETS AND EMERGING ISSUES**	
	1	Trade Secrets: Definition and Importance of Trade Secrets	9
		a) Protection and Enforcement of Trade Secrets	
	2	Emerging Issues in Intellectual Property Law	
		a) Discussion on current trends and developments in IP law.	
		b) Analysis of recent court cases and their implications on IP protection.	
	3	Open Source Software and Intellectual Property	
		a) Definition, Comparison between open source and proprietary software in terms of IP implications.	

5	**Teacher Specific Module**	
	Directions	
	Discussion on IPR and its legal issues Assignments on IPR in software industry	T

Essential Readings:

KU4VACCSC106: INFORMATION STORAGE MANAGEMENT

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
4	VAC	100 -199	KU4VACCSC106	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	0		25	50	75	1.5hrs.

Course Description:

Information Storage and Management (ISM) is a unique course that provides a comprehensive understanding of the various storage infrastructure components in data center environments. The course enables participants to make informed decisions on storage-related technologies in increasingly complex IT environments, which are fast changing with the adoption of software-defined infrastructure management and third platform technologies (cloud, Big Data, social, and mobile technologies).

Course Prerequisite: NIL

Course Outcomes:

91

CO No.	Expected Outcome	Learning Domains
1	Identify storage architectures and keydata center elements in classic, virtualized and cloud environments	U
2	Explain physical and logical components of a storage infrastructure including storage subsystems, RAID and intelligent storage systems	U
3	Describe storage networking technologies such as FCSAN, IPSAN, FCoE, NAS and object-based, and unified storage	U
4	Articulate business continuity solutions – backup and replications, along with archive for managing fixed content	U/A
5	Explain key characteristics, services, deployment models, and infrastructure components for a cloud computing	U

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE: INTRODUCTION TO INFORMATION STORAGE TECHNOLOGY**	9
	1	Introduction to Information Storage -Digital data and its types - Information storage - Key characteristics of data center -Evolution of computing platforms	
	2	Challenges in Data Storage and Management	
	3	Data Storage Infrastructure- Components of a Storage System Environment: Disk drive components - Disk Drive Performance, Logical Components.	
	4	Third Platform Technologies -Cloud computing and its essential characteristics -Cloud services and cloud deployment models -Big data analytics	

MODULE	UNIT	DESCRIPTION	HOURS
2		**MODULE TITLE:** Data protection:	9
	1	Concept of RAID and its Components.	
	2	Different RAID levels and their suitability for different application environments: RAID 0, RAID 1, RAID 3, RAID 4, RAID 5, RAID 0+1, RAID 1+0, RAID 6, Comparison of Levels	
	3	Intelligent Storage Systems: Components, Intelligent Storage Array, High-level architecture and working of an intelligent storage system.	

MODULE	UNIT	DESCRIPTION	HOURS
3		**MODULE TITLE :** Introduction to Networked Storage	9
	1	Evolution of networked storage, Architecture, Overview of FC-SAN, NAS, and IP-SAN	
	2	Network-Attached Storage (NAS): Benefits of NAS, Components	
	3	Implementations, File Sharing, I/O operations, Performance and Availability.	
	4	Content Addressed Storage (CAS): features and Benefits of a CAS. CAS Architecture	

4	**MODULE TITLE:** Storage Security and Management	9

	1	Storage Security and Management	
	2	Security Framework	
	3	Storage security domains- List and analyzes the common threats in each domain	
	4	Security Implementations	
	5	Managing The Storage Infrastructure -Monitoring the Storage Infrastructure	

5	**Teacher Specific Module**	
	Directions	
	Provide more topics related with Advanced technologies in Data storage mechanism . **Discussion on data storage problems and their security issues**	9

Essential Readings:

1. **Information Storage and Management" by Pankaj Sharma**

KU4VACCSC107: INFORMATION SECURITY

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
4	VAC	100-199	KU4VACCSC107	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	0	-	25	50	75	1.5 hrs.

Course Description:

This course introduces the basics of information security, covering key concepts such as the importance of security policies, the CIA Triad, threats and vulnerabilities, and common security measures. Students will learn about cryptography, including symmetric and asymmetric key systems, and explore network security fundamentals and ethical considerations in information security. The course aims to provide a foundational understanding of information security principles and practices.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains

93 14

1	Identify the foundational concepts and principles of information security.	U
2	Understand the principles of confidentiality, integrity, and availability in information security.	U
3	Recognize different types of security threats and vulnerabilities.	U
4	Understand cryptographic techniques in securing data	U
5	Identify network security protocols and technologies to secure network communications.	U

1		**FOUNDATIONS OF INFORMATION SECURITY**	

	1	**Foundations of Information Security**	9
		a) Definition, Importance of Information Security	
		b) Evolution of Information Security	
	2	**Security Policies, Standards, and Guidelines**	
		a) Overview of Security Policies, Types of Security Standards	
	3	**CIA Triad**	
		a) Confidentiality, Integrity, Availability	
		b) Balancing the CIATriad: Trade-offs and Challenges	
	4	**Threats and Vulnerabilities**	
		a) Types of Threats	
		b) Attacks and Malwares	
		c) Firewalls, Common Security Vulnerabilities	

2		**CRYPTOGRAPHY**	
	1	Cryptography Techniques: Basic Terms, Plain Text, Cipher text, Substitution Techniques, Transposition Techniques, Fiestel Cipher.	9
	2	Encryption, Decryption, Symmetric and asymmetric key Cryptography. Symmetric Key Encipherment - Traditional symmetric Key Ciphers: Introduction-Kirchhoff's principle, cryptanalysis.	
	3	Categories of traditional ciphers; Substitution Ciphers- mono-alphabetic ciphers, polyalphabetic ciphers	
	4	Transposition Ciphers-keyless and keyed transposition ciphers, Stream and Block Ciphers-steganography.	

3		**Public key cryptography**	
	1	Public key Cryptosystem: Principles of Public Key Cryptosystems; Applications of public Key Crypto systems.	9
	2	Requirement for Public Key Cryptosystem, Public Key Cryptanalysis. RSA Algorithm–Description of the Algorithm, The security of RSA	
		3.Digital Signature:-Comparison between conventional and digital signature-Inclusion,Verification, Relationship, Duplicity; Process-needs for keys, signing the digest; scheme.	

93

		4.Services-message authentication, message integrity, non-repudiation, confidentiality. Digital signature Forgery and types- Digital Signature Schemes-RSA digital signature scheme.	

4		**Authentication Mechanisms**	
	1	Authentication Basics, Passwords, Biometric Authentication	9
	2	Key Distribution Center, Security handshake Pitfalls, Attacks on Authentication Schemes.	
	3	Firewalls: Architecture, Generation and Types. Virtual Private Network.	
		4.Email Security: PGP and S/MIME.

	4	Primary and Secondary Memory	

_____

3	**MODULE TITLE : M**aintaining devices and software		**12**
	1	Install & connect accessories like optical drive, keyboard, mouse, monitor, Printer and troubleshoot them	
	2	Identify different types of Virus attack and take suitable course of action to disinfect a system	

4	**MODULE TITLE : Networking**		12
	1	Working Principle of Communication and utility of Network in a big System.	
	2	Network Topologies, Networking Devices,	
	3	Transmission Media, Sharing of resources.	
	4	Connect computers in a networking system and able to share, files, printers or other resources in a system.	
	5	Configure the router or modem and setup a secured connection via Internet	

5	**Teacher Specific Module**	
	1. Arrange practical session to identify various hardware components. 2. Practical session to install operating systems, application software and device drivers 3. Practice various trouble shooting techniques 4. Conduct workshop to use various network devices and connectors	12

Essential Readings:

1. PC Hardware: The Complete Reference by Craig Zacker, John Rourke
2. Mastering Pc Hardware And Networking **Paperback – Big Book, 1 January 2014**
     by Ajit Mittal (Author), Ajay Rana (Author)

KU4SECCSC 102 : CYBER ETHICS

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
4	SEC	100-199	KU4SECCSC102	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	0	-	25	50	75	1.5hrs.

Course Description:

This course explores the ethical issues arising from the use of technology and the internet. It covers fundamental ethical concepts, decision-making frameworks, and the impact of technology on privacy, security, and intellectual property. Students will examine case studies and engage in discussions to develop critical thinking skills in ethical reasoning and apply them to real-world scenarios.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Discuss the ethical implications of technology and the internet.	U
2	Examine the ethical theories and principles to analyze and evaluate cyber ethical issues.	U
3	Develop strategies for ethical decision-making in cyberspace.	C,A
4	Criticize ethical challenges in technology and the internet.	U,An
5	Develop a sense of responsibility and integrity in online behaviour and digital interactions.	A

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**INTRODUCTION TO CYBER ETHICS**	9
	1	Ethical concepts and principles	
		a) Definition of ethics	
		b) Ethical theories	
	2	Ethical decision-making frameworks	
		a) Steps in ethical decision-making, Ethical frameworks	
	3	Impact of technology on ethics	
		a) Technology's influence on privacy, security, and intellectual property	
		b) Ethical issues in emerging technologies	
	4	Ethical issues in information dissemination	
		a) Misinformation, fake news, and propaganda	

		b) Ethics of information sharing and dissemination on the internet	

2		**PRIVACY AND SECURITY IN CYBERSPACE**	
	1	Privacy in the digital age	9
	2	Cybersecurity challenges	
	3	Data breaches and their implications	
	4	Cybercrime and cyber laws	
	5	Emerging trends in cybersecurity	

3		**INTELLECTUAL PROPERTY**	
	1	Intellectual Property Rights	9
	2	Protecting Intellectual Property	
		a) Trade Secrets	
		b) Trademarks and Service Marks	
		c) Patents, Copyrights	
	3	Open access and open-source software	

4		**SOCIAL MEDIA ETHICS AND ONLINE BEHAVIOR**	
	1	Ethical issues in social media use	
		a) Online identity and anonymity, Cyberbullying and online harassment	9
	2	Professional ethics in cyberspace	
		a) Ethical behaviour in online communities and professional contexts	
		b) Digital citizenship and responsible online behaviour	
	3	Digital addiction and mental health	
		a) Impact of excessive internet use on mental health	

5	**Teacher Specific Module**	
	Conduct surveys, seminars and work shop on various cybersecurity issues	9

10

Essential Readings:

KU4SECCSC 103 : DATA ANALYTICS USING EXCEL

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
4	SEC	100-199	KU4SECCSC103	3	60

Learning Approach (Hours/ Week63)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
2	2		25	50	75	1.5hrs.

Course Description:

The course helps to learn how to clean data in spreadsheets using foundational spreadsheet functions. You will also learn how to calculate summary statistics in spreadsheets as well as how to identify data trends and relationships between variables.

Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	List out the analytics tools available in Excel	U
2	use advanced sorting and advanced conditional formatting for descriptive analysis	U/A
3	Demonstrate selected analytics functions such as DSUM, DAVERAGE, DMAX and AGGREGATE	U/A

10

4	Use What-If Analysis Tools and their applications.	A
5	Design excel analytical tool to analyse real data	E/An

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE:: introduction to EXCEL**	12
	1	About Excel & Microsoft, Uses of Excel, Excel software, , ,	
	2	Spreadsheet window pane, Title Bar, Menu Bar, Standard Toolbar, Formatting Toolbar	
	3	Formula Bar, Workbook Window, Status Bar, Task Pane, Workbook & sheets	
	3	Selecting Columns & Rows, Changing Column Width & Row Height, Autofitting Columns & Rows, Hiding/Unhiding Columns & Rows	
	4	Inserting & Deleting Columns & Rows, Cell, Address of a cell, Components of a cell – Format, value, formula, Use of paste and paste special	
2		**MODULE TITLE: : Functionality Using Ranges**	12

	1	Using Ranges, Selecting Ranges, Entering Information Into a Range, Using AutoFill	
	2	Creating Formulas : Using Formulas Formula Functions – Sum, Average, if, Count, max, min, Proper, Upper, Lower, Using AutoSum,	
	3	Advance Formulas :Concatenate, Vlookup, Hlookup, Match, Countif, Text, Trim	

3		MODULE TITLE : Spreadsheet Charts	12
	1	Creating Charts, Different types of chart, Formatting Chart Objects, ,	
	2	Changing the Chart Type, Showing and Hiding the Legend- Showing and Hiding the Data Table	
	3	Data Analysis -Sorting, Filter, Text to Column, Data Validation	

4		MODULE TITLE : PivotTables	12
	1	Creating PivotTables, Manipulating a PivotTable, Using the PivotTable	
	2	Toolbar, Changing Data Field, Properties, Displaying a PivotChart	
	3	Setting PivotTable Options, . Adding Subtotals to PivotTables	
	4	Moving between Spreadsheets, Selecting Multiple Spreadsheets, Inserting and Deleting Spreadsheets Renaming Spreadsheets	
	5	Splitting the Screen, Freezing Panes, Copying and Pasting Data between Spreadsheets, Hiding , Protecting worksheets	

5	Teacher Specific Module	
	Conduct lab exercise using real data for data set analysis and implement through spreadsheet	12

CO 1	3	2	3					
CO 2	3	2	2					2
CO 3	3			2				
CO 4	2	2	3	2				2

COURSE CONTENTS

Detailed Syllabus:

Module	Unit	Content	Hrs
I		**Foundations of No-Code Development and Web Scraping**	**12**
	1	1. No Code Fundamentals - What is No-Code Development? Benefits and Limitations of No-Code Apps - What can you build with No-Code? 2. Who can use zero-code platforms? – What is the history and future of no-code? – Popular No-Code development platforms. 3. Fundamentals of Workflow - How can workflow automation help your business? Examples of Workflow Automation.	
		4. Introduction to Web Scraping - What is No-Code Web Scraping? - ScrappingBee for Web scraping API	
II		**No Code Web Development with WebFlow and Bubble**	**12**
		1. Introduction to WebFlow - How websites are built?	
		2. Overview of Designer Interface - The Box Model	
		3. Webflows Designer - The User Interface - Changing Font Style And Elements Size - Editing	

		4.Content - Editing Button And Using Classes - Changing Background Color And Size - Reusing elements with Symbols - Publishing with WebFlow	
III		**App Development Essentials with ChatGPT Integration**	**12**
		1. Introduction to Bubble - Bubble Core Concepts - What you can build with Bubble? - How to navigate Bubble.io? –	
		2. Structuring a Bubble Database - Flexbox responsive design - Workflow creation in Bubble	
		3. Evolution of Mobile App Builders - The Fundamentals of Glide - Benefits of Glide for App Development	
		4. Glide App Editor Overview - Glide Settings Overview - Glide Components - Google Sheets Vs Glide Data Editor - Understanding Table Relations - Glide Actions	
IV		**Chatbot Development Essentials**	**12**
		1. Introduction to Thunkable - Getting Started: Sign In, Creation of New Projects - App Settings, Table View - Assets, UI Components Core Blocks	
		2. OpenAI ChatGPT Integration - Traditional AI Journey - Key AI Components - AI Superpowers	
		3. No-Code AI Market - Popular No-Code AI Platforms - No-Code AI Considerations - What is Google Teachable Machine?	
		4.What is a Chatbot? - How a Chatbot can improve your business? No-Code in Chatbots - Advantages of No-code chatbot development - Popular No-code chatbot builders .	
V		**Teachers module**	**12**
	1	**Lab Exercises** 1. Tour around the different No-Code Tool Landscape 2. Building Workflow Automation using Low-Code 3. Create a web scraping tool using No-Code 4. Working with the Designer interface of WebFlow 5. Create a Responsive WebPage using WebFlow 6. Build an Online Store using Shopify 7. Develop a website using a No-Code Stack of your choice

Course Description:

The Free and Open Source Software (FOSS) course is designed to familiarise students with the development process using free and open source software, which includes Linux operating system, service configuration management, application software, and development tools..

Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	State various FOSS concepts, features.	U
2	Discuss the features of Linux OS	U
3	Execute shell programming	U/A
4	Compare and execute various Linux commands	A/An
5	Evaluate conditional and looping statements	E

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE**: Open source software	**12**
	1	concepts, features, benefits over proprietary software, examples,	

118

	2	Free software: concepts, features, advantages, Free software Vs Open Source software	
	3	Free and Open Source Software (FOSS), Four essential freedoms	
	3	Free software movements, free software foundation(FSF), history, policies, GPL, free operating systems	

_____

2	**MODULE TITLE: :** Linux Operating System	**12**
	1	features, history, various Linux distributions,	
	2	Linux architecture, kernel and shell- Linux desktop environments-GNOME and KDE,	
	3	Linux File System and Directories, types of files, Installing and Configuring Linux, File access permissions.	

3	**MODULE TITLE :** Linux Commands	**12**
	1	Date , time, who, echo, man, info, cal, pwd, more, less, head, tail, chmod.	
	2	mkdir, cd, cp, mv, rm, touch, sort, wc, cut, cat with options, ls with options ,grep with options,	
	3	Mounting the file system, command line processing etc. Types of editors-, in Linux, Introduction to vi editor, modes in vi editor, common vi editor	
	4	Commands for open a file, save a file, delete a file, quit a file etc	

4	**MODULE TITLE :** Shell Programming	
	1	Introduction to Linux Shell and Shell Scripting, types of shells in Linux, steps in creating a shell script, write and run shell scripts,	12
	2	shell variables and printing, deleting shell variable	
	3	Script permissions and names, scripting guidelines, adding shell comments, shell variables,	
	4	Constants , operators, conditional statements, looping statements	

5	**Teacher Specific Module**	
	Shell script to print even numbers within a limit	12
	Shell script to check the number is odd or even	
	Shell script to perform arithmetic operation	
	Practice various linux commands	

119

2	2	-	25	50	75	1.5 hrs

Course Description:

This course introduces the fundamental concepts, techniques, and tools used in data science. Students will learn how to collect, clean, analyze, and visualize data using various programming languages and libraries. The course will cover topics such as data manipulation, exploratory data analysis, statistical modeling, machine learning, and data visualization.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Organize data using statistical methods to draw meaningful conclusions.	U, An
2	Use machine learning algorithms to real-world datasets for problem solving	U, A

		DESCRIPTION		

	3	Identify data characteristics and patterns through exploratory data analysis (EDA).	U
	4	Demonstrate proficiency to collect, clean, and preprocess data using Python and relevant libraries.	U, A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

2	2		25	50	75	1.5hrs.

Course Description:

The course will provide students with an introduction, overview and history of NoSQL databases (non-relational databases). The four types of NoSQL databases (e.g. Document-oriented, Key-Value Pair, Column-oriented and Graph) will be explored in detail.

Course Prerequisite: Basic Knowledge about DBMS

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Explain and compare different types of NoSQL Databases	U
2	Compare and contrast RDBMS with different NoSQL databases	An
3	Demonstrate the detailed architecture and performance tune of Document-oriented NoSQL databases	U /A
4	Explain performance tune of Key-Value Pair NoSQL databases.	U

5	Use No-SQl development tools on different types of NoSQL Databases	A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**INTRODUCTION TO TRADITIONAL COMPUTER CRIME**	12
	1	Problems associated with computer crime, Identity Theft, Identity fraud.	
	2	Computer Forensics Fundamentals- Type of Computer Forensics Technology	
	3	Type of Vendor and Computer Forensics Services. Scientific method in forensic analysis	

2		**DIGITAL EVIDENCE IN CRIMINAL INVESTIGATIONS**	
	1	The digital crime scene, Investigating Cybercrime, Duties Support Functions and Competencies -	12
	2	Computer investigation and Data Acquisition	
	3	Computer Forensics -Evidence and Capture Data Recovery-Evidence collection and Data Seizure.	
	4	Duplication and preservation of Digital Evidence-Computer image verification and Authentication.	

3		**INTRODUCTION TO INCIDENT**	

	1	Incident Response Methodology - Steps, Activities in Initial Response Phase after detection of an incident	12
	2	Creating response toolkit	
	3	Initial Response & Volatile Data Collection from Unix system Forensic	
	4	Forensic Duplication, Forensic Duplicates as Admissible Evidence,	
	5	Duplication Tool Requirements, Creating a Forensic Duplicate, Forensic Duplicate of a Hard Drive.	

4		COLLECTING NETWORK BASED EVIDENCE	
	1	Investigating Routers - Network Protocols - Email Tracing - Internet Fraud.,	12
	2	Hackers Tools. Cellphone and mobile device forensics.	
	3	Forensics hard wares and softwares, Information Security Investigations	
	4	Corporate Cyber Forensics, Investigating large scale Data breach cases, Analyzing Malicious software.	

5	**Teacher Specific Module**	12
	Discussion On Applications Of Cyber Forensic In Crime Detection And Other Areas	
	Collect information on investigation that are proved with the supports cyber forensics

KU6SECCSC109:   SOFTWARE TESTING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
6	SEC	100-199	KU6SECCSC109	3	45

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	0	-	25	50	75	1.5hrs.

Course Description:

Software testing helps to gain skills like automation, test case design, defect tracking, test automation etc. required to test software. Application of these skills help learners to find errors in developed software and report the results to the development team.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Recognize the theory of testing.	U
2	Develop test plans to guide the testing stage of the software development lifecycle.	A

| 3 | Implement tests for a variety of quality intent, including code coverage, defect finding, and statistical testing. | A |
| 4 | Construct defect reports to provide transparency and understanding to supervisors, colleagues, and users. | C |

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

KU6SECCSC110: COMPUTER GRAPHICS

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
6	SEC	100-199	KU6SECCSC110	3	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
2	2	-	25	50	75	1.5 hrs.

Course Description:

This course provides an introduction to the principles and practices of computer graphics. It covers fundamental concepts such as 2D and 3D graphics programming, rendering, animation, and graphical user interfaces. Students will learn about graphics systems, primitives, drawing algorithms, transformations, viewing techniques, and illumination models. Practical implementation and application of these concepts will be emphasized through programming assignments and projects.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Discuss the basics and history of computer graphics.	U
2	Use 2D graphics techniques like drawing and filling shapes.	A

| 3 | Implement the knowledge to Transform 2D objects with translation, rotation, and scaling. | A |
| 4 | Develop rendered images using various shading and rendering techniques. | C |

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**INTRODUCTION TO COMPUTER GRAPHICS**	12
	1	**Introduction to computer graphics**	
		a) Introduction	
		b) History and evolution	
	2	**Overview of Graphics Systems**	
		a) Display devices, Input devices, Hard-Copy devices	
	3	**Graphics Primitives and Drawing**	
		a) Points, lines, and polygons, Circle and ellipse generation algorithms.	
		b) Drawing algorithms for lines and polygons	

	4	**Graphics Software and Hardware**	
		a) Overview of graphics software	
		b) Graphics hardware	
		c) Graphics standards and file formats	

2		**TWO-DIMENSIONAL GRAPHICS**	
	1	Two-Dimensional primitives: Points, lines, and polygons	12
	2	Scan Conversion: Line, Circle, and Ellipse drawing algorithms	
	3	Polygon Filling Algorithms: Flood fill, Boundary fill	
	4	Geometric Transformations in 2D: Translation, Rotation, Scaling	
	5	Clipping in 2D	

3		**THREE-DIMENSIONAL GRAPHICS**	
	1	Three-Dimensional Primitives: Points, Lines, and Polygons	12
	2	3D Transformations	
		a) Translation	
		b) Rotation	
		c) Scaling	
	3	Viewing in 3D: Perspective and Orthographic projections	

4		**RENDERING AND ANIMATION**	
	1	Introduction to Rendering	12
		a) Types of rendering: wireframe, hidden-line, flat, Gouraud, Phong	
	2	Illumination Models:, Phong Model	
		a) Diffuse and Specular Reflection, Phong Model	
		b) Shading models: flat, Gouraud, Phong	
	3	Ray Tracing Basics	
		a) Ray-object intersection, Reflection and refraction , Raytracing algorithm	

139

	Concerned teacher can adopt proper methodologies to apply and enhance the skill in respective topics.

DISCIPLINE SPECIFIC COURSES

KU1DSCCSC101: FUNDAMENTALS OF PROGRAMMING WITH C

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
1	DSC	100-199	KU1DSCCSC101	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2	-	35	65	100	1.5hrs.

Course Description:

Topics include variables, data types, functions, control structures, pointers, strings, arrays and ... Learn the C programming language and its fundamental programming concepts. Gain the knowledge to write simple C language applications and undertake future courses that assume some background in computer programming.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Identify the basic syntax and structure of the C programming language	U
2	Design algorithms and flow chart to write program.	A

3	Understand various program control structures	U, A
4	Use advanced programming constructs such as arrays and strings in programming	U, A, E
5	Design simple C programs using appropriate programming constructs such as looping statements, conditional statements and arrays.	A, E, C

*Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
		MODULE1: Introduction to C and Basic Programming constructs	
1	1	Introduction to C	15
		a) History and importance of C	
		b) Algorithamic thinking – algorithm, flow chart examples, advantages and disadvantages	
		c) Basic structure of C	
		d) Executing a C program	
	2	C tokens	
		a) Keywords	
		b) Constants	
		c) Operators	

143

		Operators	
	3	a) Arithmetic	
		b) Relational	
		c) Logical	
		d) Assignment	
		b) Bitwise operator	
		c) Other operators	
	4	Data types and variables	
		a) Primitive data types	
		b) Variables	
		c) Declaration of variables	
		d) Initialization of variables	

2		**MODULE 2: Input/output operations**	
	1	Managing input and output operations	15
		a) Reading a character	
		b) Writing a character	
	2	Formatted input and formatted output operations	
		a) printf function	
		b) scanf function	
	3	Branching statements	
		a) Simple if	
		b) if…..else	
		c) else- if ladder	
		d) nested If	
		e) switch -case statement	

3		**MODULE 3:** looping control structures	**15**
	1	Do -while loop	
	2	While loop	

144

	3	For loop	
	4	Nesting of loop	
	5	Break and Continue Statement	

4	**MODULE 4: Introduction to arrays and string**		
	1	One Dimensional array : declaration and initialization	15
		Two Dimensional array: declaration and initialization	
	2	String: string declaration and initialization	
		String handling functions: strlen, strcat, strcpy, strcmp, strrev	

5	**Teacher Specific Module**	
	Directions	
	1. Program to find sum and average of three numbers 2. Program to print the size of all fundamental data types 3. Program to find largest among three numbers using conditional operator 4. Program to check the number is odd or even using if statement 5. Program to print the grade of a student using nested if 6. Program to perform arithmetic operations using switch statement 7. Program to find the roots of a quadratic equation 8. Program to find the factorial of a given number 9. Program to generate the Fibonacci series 10. Program to find sum of n numbers using array 11. Program to sort n numbers using array 12. Program to check a given string is palindrome or not 13. Program to generate prime numbers with in a range 14. Program to implement any five built -in string function 15. Program to perform any Matrix operation	15

Essential Readings:

1. *E*.Balaguruswamy, Programming in ANSI C, Tata McGraw-Hill

2. YashavantP.Kanetkar, Let Us C, 16th Edition, BPB

Suggested Readings:

Course Description:

This course explores the latest trends and innovations in information technology. Students will learn about emerging technologies, their impact on the industry, and how to leverage these technologies in real-world applications. Topics include artificial intelligence, blockchain, cloud computing, cybersecurity, the Internet of Things (IoT), big data analytics, and more.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Identify the impact of emerging technologies in the field of IT and real life	U
2	Judge the impact of these technologies on various industries.	An
3	Examine practical applications and case studies of emerging technologies.	A
4	Critically evaluate problem-solving skills in the context of new	A/E

technological developments.

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE:** Introduction to Emerging Technologies	15
	1	Overview of current trends in IT The importance of staying updated with technology	
	2	Edge Computing and 5G Technology- Fundamentals of edge computing.	
	3	The impact of 5G on IT infrastructure Examples of edge computing applications	
2		**MODULE TITLE: A**rtificial Intelligence and Machine Learning*	15
	1	Fundamentals of AI and ML	
	2	Applications in various industries	
	3	Ethical considerations and challenges	
3		**MODULE TITLE :** Internet of Things (IoT) & Cloud Computing	15

148

	1	Overview of IoT and its components Applications in smart homes, healthcare, and industrial automation	
	2	Security and privacy concerns	
	3	Cloud Computing- Introduction and architecture	
	4	Types of cloud services (IaaS, PaaS, SaaS)	
	5	Benefits and challenges of cloud adoption	

4	**MODULE TITLE: Cybersecurity Trends and Ethical and Social Implications of Emerging Technologies**		**15**
	1	Current cybersecurity threats and vulnerabilities The role of AI in cybersecurity	
	2	Emerging security technologies and practices-	
	3	Ethical considerations in the development and deployment of new technologies - Social impact and the digital divide	
	4	Regulatory and policy issues	

5	**Teacher Specific Module**		
	Directions		
		Online courses for maximum 2hr from any online platform like Udemy, Skill share, Coursesera etc.and keep the certificate The courses may be 1. Current trends in information technology 2. Fundamentals of AI 3. Cyber security 4. Data science 5. cyber ethics 6. Ethical hacking	15

Essential Readings:

1. "Artificial Intelligence: A Modern Approach" by Stuart Russell and Peter Norvig

 "Cloud Computing: Concepts, Technology & Architecture" by Thomas Erl

2. "Cybersecurity and Cyberwar: What Everyone Needs to Know" by P.W. Singer and Allan

Friedman

MODULE	UNIT	DESCRIPTION	HOURS

151

1		MODULE TITLE: Introduction to Computers	
	1	Definition and Characteristics of Computers, Brief History and Evolution of Computers. Computer System Overview, Basic Components of a Computer System - Input, Output, Processing, and Storage.	15
	2	**Central Processing Unit (CPU):** Basic Concepts of CPU, Function and Components, Architecture of a CPU - ALU, Registers, and Control Unit,	
	3	System Memory and Storage: Memory Hierarchy - An Overview, Primary Memory - RAM (Random Access Memory) and ROM (Read-Only Memory) - Types and Functions, Secondary Memory - Hard Drives, SSDs, USB Drives (Overview and Basic Working Principle), Introduction to Cache Memory - Purpose and Basic Functioning	
	4	Motherboard and Internal Components: Components Inside a Computer Cabinet - Motherboard, BIOS, CMOS Chip, Ports and Interfaces - USB, HDMI, Ethernet. Expansion Slots and Cards - GPU, Sound Card, Network Card, Storage Devices - HDD, SSD, Optical Drives (Basic Concepts only)	

2		MODULE TITLE : Introduction to Data Representation	
	1	Decimal, Binary, Hexa-Decimal and Octal Number Systems, Conversion Between Number Systems.	15
	2	Binary Arithmetic and Complements: Binary addition, subtraction, multiplication and division, Complements of Binary Numbers (1's Complement and 2's Complement)	
	3	Special Codes and Unicode: Binary Coded Decimal (8421 BCD Code, Applications, BCD Addition), Gray Code, ASCII Code, Unicode	

3		MODULE TITLE: Introduction to Software	
	1	Types of Software - Application software, System Software, Operating Systems - Basics Function, examples,	15
	2	Software Licensing and Acquisition: Retail, OEM, Demo, Shareware, Freeware, Open-Source Software	

| | 3 | Programming Languages: Types, Basic Concepts of Compiler, Assembler, Interpreter, Linker and Loader, Source code and Object code, Program Development Life Cycle. | |
| | 4 | Algorithmic Thinking: Algorithm, Flowcharts, Examples | |

4		**MODULE TITLE: Introduction to Programming** using C	
	1	Definition and core concepts of programming, Characteristics of a good program, Representing Algorithms with Pseudocode - examples	15
	2	Variables and Data Types: Understanding variables and assignment statements, Overview of common data types: Integers, Floats, Strings, Basics of Input and Output Operations in programming.	
	3	Program Control Structures: Sequential execution, Conditional execution using If statements, Fundamentals of iterative execution with loops	

5	**Teacher Specific Module**	**15**
	Do the lab experience for the following and keep an assignment based on this as record 1. Identify various parts of computer A) Processor B) motherboard C) input devices D) Output devices E) RAM and RAM slot 2. Identify various secondary storage devices A) Hard Disk B) CD, DVD C) Pendrive 3. Identify various types of ports A) USB (Universal Serial Bus) Port B) Ethernet Port (RJ45) and RJ45 socket C) HDMI (High-Definition Multimedia Interface) D) serial port (rs-232) E) parallel port F) PS/2 Ports 4. Steps for installing any software(application packages like.) 5. Algorithm and flow chart to implement various program control structures. A) Write an algorithm and flow chart to find sum and average three numbers B) Write an algorithm and flow chart to find largest among three numbers. C) Write an algorithm and flow chart to check whether the given number is odd or even D) write an algorithm and flow chart to find sum of 10 numbers using looping statement

Course Description:

Office Automation program focuses on providing basic training in computers and its most common software which is to be used in Office work. With the help of this program, students will be able to become an expert in Office Automation.

Course Prerequisite: NIL

Course Outcomes:

		Expected Outcome	Learning Domains
		Demonstrate proficiency in using word processing software to create, edit, and format professional documents.	U
		Apply essential spreadsheet functions and formulas to analyze and manage data.	U, A
		Create visually appealing charts and graphs to effectively communicate data insights.	U, A, C

155

		Understand and apply practical knowledge about word processing and worksheet software	U, A, C

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	
		MODULE TITLE: Introduction to Word Processing	
		Getting Started with the Interface	
		Creating and Saving Documents	
		Text Formatting and Editing Tools (Paragraph Indentation, Bullets and Numbering, Change the line spacing in Word, Alignment, change case, Text Highlight Color, Font Color, Bold, Italics, Underline)	15
		Styles and Templates	
		MODULE TITLE: Advanced Word Processing Techniques	15
		Working with Tables and Images	
		Creating Headers, Footers, and Page Numbers	
		Mail Merge and Creating Form Letters	
		Document Security and Protection	
		MODULE TITLE: Introduction to Spreadsheets	15
		Understanding Spreadsheets - Cells, Rows, Columns	
		Entering and Editing Data - Data Types & Formatting	
		Creating Charts and Graphs	
		Printing and Sharing Spreadsheets	
		MODULE TITLE: Advanced Spreadsheet Techniques	15
		Working with Large Datasets - Filtering & Sorting	

		Advanced Functions and Formulas (sum, average, max, min, count)	
		Arithmetic Operations (+, -, *, /)	
		Text Functions (CONCAT, UPPER, LOWER, PROPER)Logical Functions (IF, AND, OR)	
		Lookup and Reference Functions (VLOOKUP, MATCH)	
		Date and Time Functions (TODAY( ), NOW( ), DATE( ))	
		Statistical Functions (AVERAGE, MEDIAN, STDEV)	
		Data Analysis Tools (e.g., PivotTables)	
		Creating Macros and Automation	

		Teacher Specific Module	15
		Directions	
		1. Document creation using word processor tool 2. Create a banner for college union inauguration 3. Create a biodata with your photo 4. Implement mail merge technique in word processor 5. Programto implement aggregate functions in spreadsheet 6. Perform result analysis using different types of charts	

Essential Readings:

1. **Microsoft Word:**

   o "Getting Started with Microsoft Word: [Book Title about MS Word, Latest Edition]" by [Author(s)] ([Publisher Year]) - This book provides a foundational understanding of core functionalities in Microsoft Word.

   o "Microsoft Word Power Programming: [Book Title about Advanced MS Word, Latest Edition]" by [Author(s)] ([Publisher Year]) - For students interested in exploring advanced features and automation techniques in Word.

2. **Microsoft Excel:**

   o "Excel Formulas and Functions for Beginners: [Book Title about MS Excel Formulas, Latest Edition]" by [Author(s)] ([Publisher Year]) - A helpful guide to grasp essential formulas and functions in Microsoft Excel.

   o "Data Analysis with Microsoft Excel: [Book Title about MS Excel Data Analysis, Latest Edition]" by [Author(s)] ([Publisher Year]) - This book delves into data analysis techniques and tools within Microsoft Excel.

Suggested Readings:

Google Workspace:

1. "The Complete Guide to Google Docs: [Book Title about Google Docs, Latest Edition]" by [Author(s)] ([Publisher Year]) - A comprehensive guide to using Google Docs and its functionalities.

2. "Mastering Google Sheets: [Book Title about Google Sheets, Latest Edition]" by [Author(s)] ([Publisher Year]) - An in-depth exploration of Google Sheets features and data analysis capabilities.

KU1DSCCSC105: INTRODUCTION TO WEB PROGRAMMING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
1	DSC	100-199	KU1DSCCSC105	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2		35	65	100	1.5hrs.

Course Description:

The course helps to design and practice real-world homepage programs and earn adequate experience with current web design techniques such as HTML5 and cascading style sheets. **Course Prerequisite: NIL**

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Identify different components in web technology and WWW	U, A
2	Apply HTML Forms and CSS Styling to design web pages.	U, A
3	Design webpages using HTML Forms.	U, A
4	Design interactive Web pages	U, A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5	PSO 6	PSO 7
CO 1	3			3			
CO 2	3			3			
CO 3	3	3					
CO 4	3	3					

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		MODULE 1 : Introduction to Internet and WWW	
	1	Introduction to Internet a) Evolution of the Internet b) World Wide Web c) Web Browsers, URL, http	15
	2	Web Basics a) Static Vs Dynamic web pages b) Client-Side Scripting versus Server-Side Scripting	
	3	W3C & Web hosting a) World Wide Web Consortium (W3C) b) Web hosting, types of web hosting, Free hosting	
	4	Domain Name Registration	
2		**MODULE 2: HTML**	

		Introduction to HTML	15
	1	a) Creating HTML document	
		b) Tags & attributes, syntax of tag	
		c) Starting and ending tag, tag without end, building a webpage	
	2	Text formatting	
		a) Division	
		b) Paragraphs & heading	
		c) Physical style tags, text alignment, fonts	
	3	Hyperlink and loading images	
		a) Linking to other web pages	
		b) Images and <img> tag	
		c) Line breaks, comments	
	4	List: types of list, nested list	

3		MODULE 3: HTML Tables and Forms	
	1	HTML Tables: creating a table, table tags and attributes, formatting the table: width, height, align, border, padding & spacing, colspan&rowspan	15
	2	HTML Forms: Form elements (input, select, textarea, button, datalist), Input types (text, password, submit, radio, checkbox, date, email, number)	
	3	Input type attributes (value, readonly, disabled, maxlength, autocomplete, list, min, max, placeholder)	
	4	HTML5 form validation (required and pattern attribute of input type)	

4		MODULE 4: CSS	
	1	CSS -Advantages, types of CSS- Inline, internal and external CSS	15
	2	Applying style to HTML using CSS	
	3	CSS Colours, Fonts, Borders, padding, Applying style using class and id attribute	

5	Teacher Specific Module	
	Practice the lab following lab exercises and keep records.	15
	1. HTML program to implement basic HTML tags 2. HTML program to implement various heading formatting tags 3. HTML program to implement IMG tag 4. HTML program to implement various types of listing tax 5. HTML program to design a table to represent the mark list 6. HTML program to implement various form elements and attributes	

Essential Readings:

1. Internet and World Wide Web How to program, P.J. Deitel & H.M. Deitel Pearson

2. An Introduction to WEB Design and Programming –Wang-Thomson **Technologies**, Black Book, Dream tech Press

3. Julie C. Meloni, HTML and CSS in 24 Hours, Sams Teach Yourself (Updated for HTML5 and CSS3), Ninth Edition

Suggested Readings:

1. Mastering HTML, CSS &Javascript Web Publishing Paperback,2016 - by Laura Lemay, Rafe Colburn & Jennifer Kyrnin , BPB Publications

2. HTML & CSS: The Complete Reference, Fifth Edition - Thomas a Powell, Tata McGraw Hill

Assessment Rubrics:

KU1DSCCSC106:AI IN DAILY LIFE

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
1	DSC	100-199	KU1DSCCSC106	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2		35	65	100	1.5 Hrs

Course Description:

This course aims to introduce the fundamental concepts of artificial intelligence (AI) to individuals from all academic backgrounds. Participants will develop a broad understanding of AI technologies, their implications, and their potential applications in various fields. The course will emphasize practical examples and real-world case studies to facilitate comprehension and inspire innovative thinking.

Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Define and explain the fundamental concepts and subfields of AI. .	U
2	Identify real-world applications of AI across various industries	U/A
3	Analyze the ethical, social, and economic implications of AI.	U/A
4	Recognize the potential of AI to drive innovation and transformation	A/An

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE**: **Introduction to Artificial Intelligence**	15
	1	Definition and scope of AI	
	2	Historical overview and key milestones	
	3	Differentiating AI from human intelligence	
2		**MODULE TITLE: AI Subfields and Technologies**	15
	1	Machine learning: Supervised, unsupervised	
	2	Reinforcement learning	
	3	Deep learning and neural networks	
	4	Natural language processing (NLP) and computer vision	
3		**MODULE TITLE : Applications of AI**	15
	1	AI in healthcare: Diagnosis, treatment, and medical imaging	
	2	AI in finance: Fraud detection, algorithmic trading, and risk assessment	
	3	AI in transportation: Autonomous vehicles and traffic optimization	
	4	AI in customer service and chatbots	
	5	AI in education: Personalized learning and intelligent tutoring system	
4		**MODULE TITLE :Ethical and Social Implications of AI**	15
	1	Bias and fairness in AI systems	
	2	Impact of AI on employment and the workforce	

	Teacher Specific Module	
5	Practice online classes on various AI Applications with a minimum duration of 3 hours and keep certificates conduct practical examination based on this. 1. Introduction to AI and it's Applications 2. Chat GPT 3. Power BI 4. Data analytics tools 5. Designing tools	15

Essential Readings:

1.Artificial Intelligence: A Modern Approach – Stuart J. Russell & Peter Norvig.

2.Artificial Intelligence in Daily Life eBook : Lee, Raymond S. T.

3.*AI in Daily Life: A Practical Guide to Enhancing Your World Kindle Edition* by Michael A. Campanelli

Course Description:

Computer Fundamentals courses provide a comprehensive introduction to basic computer concepts and skills. Topics covered include hardware, software, operating systems, networking, and troubleshooting. Gain essential knowledge to navigate the digital world effectively.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Identify various components of Computer system	U /R
2	Discuss various Logic Gates and their features.	U /R
3	Identify the basics of programming	U
4	Design effective and error free programs in C	A

__Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)__

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		MODULE 1:	

	1	**Introduction to Computers:** Definition and Characteristics of Computers, Brief History and Evolution of Computers. Computer System Overview, Basic Components of a Computer System - Input, Output, Processing, and Storage.	15
	2	**Central Processing Unit (CPU):** Basic Concepts of CPU, Function and Components, Architecture of a CPU - ALU, Registers, and Control Unit, How a CPU Executes Instructions - Fetch-Decode Execute Cycle.	
	3	**System Memory and Storage:** Memory Hierarchy - An Overview, Primary Memory - RAM (Random Access Memory) and ROM (ReadOnly Memory) - Types and Functions, Secondary Memory - Hard Drives, SSDs, USB Drives (Overview and Basic Working Principle), Introduction to Cache Memory - Purpose and Basic Functioning.	
	4	**Motherboard and Internal Components:** Components Inside a Computer Cabinet - Motherboard, BIOS, CMOS Chip, Ports and Interfaces - USB, HDMI, Ethernet. Expansion Slots and Cards - GPU, Sound Card, Network Card, Storage Devices - HDD, SSD, Optical Drives (Basic Concepts only	

2	**MODULE 2:**	
	1	**Introduction to Data Representation:** Decimal, Binary, HexaDecimal and Octal Number Systems, Conversion Between Number Systems.	15
	2	**Binary Arithmetic and Complements:** Binary addition, subtraction, multiplication and division, Complements of Binary Numbers (1's Complement and 2's Complement)	
	3	**Advanced Number Systems:** Signed Numbers, Floating Point Numbers - Representation of Real Numbers in Binary, IEEE Floating Point Standard, Examples and Applications	
	4	**Special Codes and Unicode:** Binary Coded Decimal (8421 BCD Code, Applications, BCD Addition), Gray Code, ASCII Code, Unicode	

3	**MODULE 3:**	

			15
	1	**Introduction to Software:** Types of Software - Application software, System Software, Operating Systems - Basics Function, examples,	
	2	**Software Licensing and Acquisition:** Retail, OEM, Demo, Shareware, Freeware, Open-Source Software.	
	3	**Programming Languages:** Types, Basic Concepts of Compiler, Assembler, Interpreter, Linker and Loader, Source code and Object code, Program Development Life Cycle.	
	4	**Algorithmic Thinking:** Algorithm, Flowcharts, Examples	

4		MODULE 4:	
	1	**Introduction to Computer networks:** Data Communication System and Its Components, advantages of networking., hardware components of networking	
	2	Data Flow, digital and analog signals, types of Connection and Topologies, LAN, MAN, WAN, internet.	15
	3	Digital Transmission -Transmission Modes, transmission media	
	4	Hands on training in software installation and Common trouble shooting problems with computer hardware.	

5	Teacher Specific Module	
	Directions	
	Provide appropriate methodologies and evaluation metrics suitable to the topics.	15

Essential Readings:

1. Kernighan, Brian W (2011). D is for Digital: What a well-informed person should know about computers and communications. CreateSpace Independent Publishing Platform.

2. Goel, Anita (2010). Computer fundamentals. Pearson Education India.

3. Floyd, Thomas L (2011). Digital fundamentals, 10/e. Pearson Education India.

4. Petzold, C. (2022). *Code: The Hidden Language of Computer Hardware and Software*. Pearson Education.

7.Andrew S. Tanenbaum, "Computer Networks", 4th ed., Prentice Hall, 2003.

KU2DSCCSC108: ADVANCED PROGRAMMING WITH C

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
2	DSC	100-199	KU2DSCCSC108	4(3T+1P)	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2	-	35	65	100	1.5hrs.

Course Description:

The course enables to use advanced C programming language constructs and techniques to create more structured and portable code. Topics included various data storing structures like Arrays, Structure, union, Functions and File concepts Use advanced pointer concepts to allow very flexible data access and create arrays of pointers, arrays of structures and unions, and pointers to arrays of structures and unions.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Understand the concept of storing multiple datatypes using structure and union	A

172

2	Understand the concept of pointers and their usage in memory management	U/A
3	Identify the usage of function and apply the functions in programming	U/A
4	Discuss the usage of file concept in programming	An
5	Apply various data accessing and storing concepts in C language and write program code to solve real life problems.	A/An

*Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

CO 4	3	3	2			1	
CO 5	3	3	2			1	2

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**STRUCTURE and UNION**	
	1	Structure	15
		a) Structure declaration and Initialization	
		b) Array of structure variables	
		c) Array within structure	
		d) programs to implement usage of structure	
		Union : Union declaration and Initialization, memory allocation, and accessing union members.	

173

	2	b) Simple programs using union, Difference between Union and Structure	

2		**POINTERS**	
	1	a) Declaring pointers, accessing data though pointers	15
		b) NULL pointer , Array access using pointers	
		c) Pointer Arithmetic	
		d) **Dynamic Memory Allocation:** Allocating and deallocating memory using functions like malloc(), calloc(), realloc(), and free().	

3		**INTRODUCTION TO MODULAR PROGRAMMING**	
	1	Functions	15
		a) Function prototype, definition and calling , types of functions	
		b) Writing functions, formal parameters, actual parameters, types of functions based on arguments and return types	
	2	Recursion , argument passing mechanisms	
	3	Arrays as Function Parameters	
	4	Structures as Function Parameters	
	5	Storage Classes	
	6	Simple programs using functions	

4		**FILES AND COMMAND LINE ARGUMENTS**	
		File Operations	15
	1	a) open, close, read, write, append	
		b) Sequential access and random access to files: Built-in file handling functions (rewind(), fseek(), ftell(), feof(), fread(), fwrite()), c) Writing and Reading files in Text Format	
		d)Writing and Reading in Binary Format	
		a) Command Line Argument	
	2	b) Variable Number of Arguments	

5	**Teacher Specific Module**	**5**

174

List of Sample programs:

STRUCTURE

1. Create a structure to store the name, UID, marks of five subjects of students in a class.

Display the rank list of the students.

2. Using structure, read and print data of n employees (Name, Employee Id and Salary)

UNION

3. Declare a union containing 5 string variables (Name, House Name, City Name, State and Pin code) each with a length of C_SIZE (user defined constant). Then, read and display the address of a person using a variable of the union.

FUNCTIONS

4. Read a string (word), store it in an array and obtain its reverse by using a user defined function.

5. Find the sum of digits of a number using a user defined function.

6. Read an array and perform sorting by passing the array to a user defined function

POINTERS

7. Do the following using pointers
   i)   Add two numbers

   ii) Swap two numbers using a user

   defined function

8. Input and Print the elements of an array using pointers.

9. Compute sum of the elements stored in an array using pointers and user defined function.

FILES

10. Create a file and perform the following

i) Write data to the file ii) Read the data in a given

file & display the file content on console iii) Append

new data and display on console

11. Open a text input file and count number of characters, words and lines in it; and store the results in an output file. **COMMAND LINE ARGUMENTS** 12. Programto illustrate the use of command line arguments	
	5

Essential Readings:

1. Schaum Series, Gottfried B.S.,Tata McGraw Hill,Programming with C

2. E. Balagurusamy, Mcgraw Hill,Programming in ANSI C

3. Asok N Kamthane, Pearson,Programming in C

4. Anita Goel, Pearson, Computer Fundamentals

Suggested Readings:

1. Anita Goel and Ajay Mittal, Pearson, Computer fundamentals and Programming in C

2. Brian W. Kernighan and Dennis M. Ritchie, Pearson, C Programming Language

3. Rajaraman V, PHI, Computer Basics and Programming in C

4. Yashavant P, Kanetkar, BPB Publications, Let us C

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2		35	65	100	1.5 hrs.

Course Description:

This course introduces the core principles and techniques required in the design and implementation of database systems. This course focus on relational database management systems, including database design theory: E-R modeling, data definition and manipulation languages, database security and administration.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains

177

1	Understand the concept of database management system and identify its advantages over manual file keeping		U
2	Understand the need of data modelling and identify the advantages and disadvantages among the models		U
3	Able to write queries using SQL to manipulate data		A
4	Apply the knowledge of data types and other functions in data storage and retrieval		A
5	Apply skills in joining relations for better data management		C

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE 1: DBMS introduction**	

	1	Overview of Databases - Definition and purpose of databases –Types of database management system	15
	2	Significance of databases in modern applications and industries Transaction management	
	3	View of Data, Data Models-relational-hierarchical-network and E-R model	
	4	Database architecture – Storage manager- Query Processor. Database users	

2		**MODULE 2: Entity Relationship model**	
	1	Entity-Relationship Model - Understanding entities, attributes, and relationships - Designing Entity-Relationship Diagrams (ERDs) -	15
	2	Cardinality and participation constraints in ER modelling	
	3	Normalization- need and different types-conditions of different normal forms -1NF,2NF,3NF and BCNF with example	
	4	Creating Tables and Relationships - Implementing ER model into relational tables	

3		**MODULE 3: SQL**	
	1	Defining key and constraints in a relation. Primary , candidate, Super key, alternate and foreign keys.	15
	2	Constraints- unique, check, default, not null constraints. Mention Domain constraints, entity constraints-Establishing relationships between tables using referential integrity	
	3	SQL: database languages; DDL- create, alter, drop	
	4	DML- Insert , Select, update, Delete; DCL – Grant, Revoke, TCL Commit-Rollback	

		MODULE 4: SQL Join Operations and emerging trends IN DBMS	
4	1	Data types in SQL-functions in SQL-Aggregate functions, string functions and numeric functions.	15
	2	Clauses (order by, Group by, Having)and Pattern matching, views.	

| 3 | Join in SQL INNER, OUTER AND CROSS JOIN, Relational algebraic operations. | |
| 4 | Introduction to emerging Technologies (e.g., NoSQL, NewSQL) - concepts only | |

5	**Teacher Specific Module**	
	Directions	
	1. Create table and implement various DDL commands 2. Create table and implement various DML commands 3. Create table and implement various aggregate functions. 4. Create table and implement various DDL commands 5. Create table and implement various clauses and pattern matching commands. 6. Create table and implement different types of joins	15

Essential Readings:

1. Database System Concepts by Abraham Silberschatz, Henry F. Korth, and S. Sudarshan

2. Fundamentals of Database Systems by RamezElmasri and Shamkant B. Navathe

3. Learning SQLby Alan Beaulieu

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		INTRODUCTION TO C	
	1	History of C- Basic Structure of C Programs- Compiling and Running C Programs in Linux- C Character Set,	
	2	C tokens- Keywords and Identifiers- Constants- Variables-Declaration of variables-Assigning values to variables	15
	3	Data Types-Primary Data Types (int, char, float, double- User defined data types	
	4	Derived data types (name only), Empty data set(void).	

MODULE	UNIT	DESCRIPTION	HOURS
2		**OPERATORS AND FORMATTED AND UNFORMATTED CONSOLE I/O**	
	1	Introduction- Arithmetic Operators, Relational operators, Logical operators.	15
	2	Increment/Decrement operators, Assignment operators, conditional operators, Bitwise operators, special operators. Operator Precedence	
	3	Formatted Console I/O- Functions (printf, scanf), Escape Sequences	
	4	Unformatted Console I/O Functions- getch(), putch(), gets(), puts()	

MODULE	UNIT	DESCRIPTION	HOURS
3		**STORAGE CLASSES AND PROGRAM CONTROL STRUCTURES**	
	1	Introduction – Storage classes - automatic static , register , extern , simple example programs -,	15
	2	Decision Control Structures - Introduction- if statement : simple if statement , if-else statement, nesting of if-else, else if ladder.	
	2	Conditional Operator, switch Statement, go-to Statement.	

	3	Loop Control Structure – for loop- General form, working, simple example programs -while Statement: General form, working, simple example programs- do-while Statement: General form, working, simple	

4		**ARRAY AND STRINGS**	
	1	Arrays- Introduction- One Dimensional Arrays: Declaration of arrays, Initialization of arrays - Two Dimensional Arrays: Initialization – Multi dimensional arrays (only general form) . -	15
	2	Strings- Introduction-Declaring and initializing string variable – Reading strings from terminal-Reading line of text, writing strings to screen	
	3	String handling Functions (strlen, strcpy, strcat, strcmp).	
	4	Sample programmes using arrays and strings.	

5	Teacher Specific Module	
	Lab list	
	1. Program to find sum and average of three numbers . 2. Program to print the size of all fundamental data types 3. Program to find largest among three numbers using conditional operator 4. Program to check a number is positive or negative using if statement 5. Program to print the grade of a student using nested if 6. Program to perform arithmetic operations using switch statement 7. Program to find the roots of a quadratic equation 8. Program to find the factorial of a given number 9. Program to generate the Fibonacci series 10. Program to find sum of n numbers using array 11. Program to sort n numbers using array 12. Program to check a given string is palindrome or not 13. Program to generate prime numbers with in a range 14. Program to implement any five built -in string function 15. Program to perform any Matrix operation	15

Books for Study:
1. Yashavant P. Kanetkar, Let Us C, 16th Edition, BPB
2. E. Balaguruswamy, Programming in ANSI C, Tata McGraw-Hill

Books for Reference:
1. Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language,Prentice Hall of India
2. Byron Gottfried, Schaum's Outline of Programming with C, McGraw-Hill

3	2		35	65	100	2hrs.

Course Description:

The course helps to create interactive content for movies, advertisements, commercials, video games, and television shows. This course gives an excellent opportunity to build a strong portfolio.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Recognize with the media software	U
2	Design digital publications using Photoshop	U, A, C
3	Explain editing software	U, A
4	Identify the basic idea of audio and video editing	U, A, E

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS

1	MODULE 1: Multimedia & Media software	
	Introduction to Multimedia	15
1	a) Definition	
	b) Building blocks of multimedia (Text, Graphics, Audio, Video, Animation)	
2	Multimedia System, desirable Features of multimedia System	
3	Data Compression, Multimedia Applications, Virtual reality	
4	Introduction to Media Software Application, System Software, Application Software	

2	MODULE 2: Photo Editing Software Applications	
1	Photoshop, light room, highlights, midtones and shadows, levels, balance, cure	15
2	Histogram, basic tools, crop, lasso tool, pen tool, text	
3	Keyboard short cuts, layers, masking,	
4	Effects, photo manipulation and editing, raw, jpeg, tiff, Exploring Formats	

3	MODULE 3: Video Editing	
1	Software for Video Editing, Premier Pro or FCP, ratio, resolution	15
2	Introduction to software interface, creating project and sequence,	
3	Timeline, basic cuts, transitions and effects, LUTs, effect window, title graphics	
4	Nesting, stabilizer, video formats and extensions.	

4	MODULE 4: Audio and Animation	
1	Software for Audio: Adobe Audition, software interface, wave and multi-track view, basic tools	15

2	Applying audio effects, effect adjustments, audio recording, mixing, gain, pitch, volume, pan, file formats.	
3	Software for Basic Animation: An Introduction to Adobe after Effects, The basics of creating projects. compositions, and layers	
4	Importing footage, including video, audio, and still images, creating special effects using the Effects menu	

5	Teacher Specific Module	
	Directions	
	Provide appropriate methodologies and evaluation metrics suitable to the topics.	15

Essential Readings:

1. Introduction to Information Technology (Second Edition) by ITL Education Solutions Limited, Pearson

2. Adobe Photoshop CC Classroom in a Book (2018 Release) Book by Andrew Faulkner and Conrad Chavez

3. https:lihelpx.adobe.com/in/photoshop/tutorials.html

4. Adobe After Effects CS6 Digital Classroom Book by Jerron Smith

5. Adobe Premiere Pro Classroom in a Book (2020 release) by Maxim Jago

6. https:/lhelpx.adobe.com/prerniere-pro/vierv-all-tutorials.html

7. https://helpx.adobe.com/in/audition/tutorials.html

Suggested Readings:

1. Adobe After Effects CC Classroom Book 2018 | First Edition I By Pearson

2. Adobe Audition CC Classroom 2013 by Adobe Creative

3.https://helpx.adobe.com/in/indesign/tutorials.html

Course Description:

This course introduces students to the fundamental concepts and techniques of data analytics. Introduces students to the Python programming language using an embedded

189

programming environment. The modules explore if-statements and loops to illustrate concepts of flow-control and iteration and also some data visualization tools that helps in data analytics.

Course Prerequisite: NIL
Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Under stand the term data analytics and various steps included in data analytics	U
2	Understand the features of python as a tool for data analytics	U, A
3	Design programs using various python features like operators, control structures and other python objects.	U, An
4	Design programs using built-in modules in Python	U, C
5	Apply various visualization tools in python for data analytics.	U, A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE 1:**	

	1	Data analytics definition-steps in data analytics-types of data analytics-tools for data analytics-Career Opportunities in Data Analytics	15
	2	Features of Python, Different Methods to Run Python, Basic Elements (Objects, Expressions, Numerical Types, Strings, Variables),	
	3	Comments, Indentation in Python, Input and Output in Python, import function, Operators in Python	
	4	Branching (if, else, elif), Iteration (while, for), range and enumerate functions	

2	**MODULE 2:**	
1	Looping structures in python	
	2	Tuples, Lists, Dictionaries, Sets- Built-in methods of lists, sets and dictionaries	
	3	Mutable and Immutable Objects.	15
	4	Modules, Built-in Modules (math, statistics), Creating Modules	

3	**MODULE 3:** PYTHON MODULES FOR DATA ANALYTICS	
1	Numpy module - Creating Arrays (array, zeros, ones, empty, linspace, arrange, random),	15
2	Two-Dimensional Array (Indexing, Slicing, Iterating)	
3	Pandas functions for data analytics- reading data-read_csv(), framing data- Series.to_frame(), cleaning data- drop_duplicates(),F `illing data` fillna()	
4	Matplotlib functions-plot(), label(), bar(), scatter(), pie(),show()	

4	**MODULE 4**	
1	Data Visualization using Python, matplotlib Module	
2	pyplot, plot(), hist, scatter, bar charts	15

191

| | 3 | Formatting, figure(), subplot(), text(), xlabel(), ylabel(), title() | |
| | 4 | Plotting Simple Mathematical Functions (sin x, x2) | |

5	**Teacher Specific Module**	
	Directions	
	1. Write a Python program that will accept the base and height of a triangle and compute its area. 2. Write a Python program to get the largest number from a list 3. Write a Python script to sort (ascending and descending) a dictionary by value. 4. Write a Python program to create a set 5. Write a Python program to create a union of sets. 6. Write a Python program to read a given CSV file as a list. 7. Write a Python programming to display a bar chart of the popularity of programming Languages. Use uniform color. Sample data: Programming languages: Java, Python, PHP, JavaScript, C#, C++ Popularity: 22.2, 17.6, 8.8, 8, 7.7, 6.7 8. Write a Python programming to create a pie chart of gold medal achievements of five most successful countries in 2016 Summer Olympics. Read the data from a csv file. Sampledata: **medal.csv** country,gold_medal UnitedStates,46 GreatBritain,27 China,26 Russia,19 Germany,17	15

Essential Readings:

1. Basic Python Programming for Beginners

by Dr. Marlapalli Krishna & S. Jaya Prakash Dr. Marlapalli Krishna, K. Varada Rajkumar
2. Learn Python Programming - by Fabrizio Romano

3. https://www.w3resource.com/

KU3DSCCSC201: OBJECT ORIENTED P ROGRAMMING USING JAVA

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
3	DSC	200-299	KU3DSCCSC201	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2	-	35	65	100	1.5 Hrs

Course Description:

Java is a multi-platform, object-oriented, and network-centric language that can be used as a platform in itself. It is a fast, secure, reliable programming language for coding everything from mobile apps and enterprise software to big data applications and server side technologies.

Course Prerequisite: NIL

Course Outcomes:

CONo.	Expected Outcome	Learning Domains
1	Demonstrate proficiency in fundamental Object-Oriented Programming (OOP) concepts.	U
2	Understand the concept of class and objects	U,A

194

3	Apply the concept of inheritance, interface and threads in programming		U, A, C
4	Understand the basic components of AWT		U
5	Develop AWT applications, applying event handling mechanisms and utilizing appropriate layout managers for effective GUI design		U, A, C

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSECONTENTS

Contents for Classroom Transaction:

M O D U L E	U N I T	DESCRIPTION	HOURS
1		**MODULE1: Introduction to OOP and Java Basics**	
	1	Understanding Object-Oriented Programming (OOP) Concepts - Introduction to Classes and Objects - Encapsulation, Inheritance, Polymorphism, and Abstraction in detail.	15
	2	Introduction to Java - Overview of Java Programming Language – Setting up the Java Development Environment(IDE)-Basic Syntax and Data Types in Java. I/O operations- Reading data from the console.	
	3	Control Flow and Looping Constructs: if statements, switch statement- syntax and programmes	

195

| | 4 | looping statements, jumping statements- syntax and programmes | |

2		**MODULE2: Java classes and Inheritance**	
	1	Introducing Classes: Class fundamentals; Introducing methods; Declaring Objects; Constructors.	15
	2	This keyword; Garbage collection; the finalize method.	
	3	Inheritance basics – Definition-extends keyword-Types of inheritance-single inheritance-Multilevel inheritance- Hierarchical inheritance.	
	4	Using super keyword-Method Overriding. Access modifiers in inheritance Dynamic method dispatch and runtime polymorphism-Abstract classes.	

3		**MODULE3: INTERFACES and PACKAGES**	**15**
	1	Interfaces - interface Keyword- implementing an Interface- Multiple Interfaces- Default and Static Methods- inheritance in Interfaces- Inheritance vs Interfaces – Comparison.	
	2	Packages- Definition- Types of Packages- Built-in packages- User-defined packages- Creating a Package- Importing Packages- Access Modifiers and Packages-	
	3	Package Naming Conventions- Compiling and Running with Packages-CLASSPATH- Why is Classpath Important? How to Set the Classpath-Using the CLASSPATH Environment Variable- Using the -classpath or -cp option.	
	4	Multithreading in Java -Understanding Threads and Concurrency-Synchronization and Thread Safety-Thread life cycle-Exception Handling: try and catch, multiple catch- Default and Static Method.	

4		**MODULE4: GUI Programming with AWT**	
	1	Introduction to AWT-What is AWT?-AWT package (java.awt and java.awt.event)-Platform-dependence of AWT-	*15*

2	AWT Components – Label- Button- TextField - TextArea -Checkbox CheckboxGroup (Radio buttons)- List AWT Containers - Panel – Frame – Dialog – Applet.	
3	Event Handling in AWT- ActionEvent- WindowEvent- MouseEvent- KeyEvent- ItemEvent	
4	Event listeners: - ActionListener - WindowListener - MouseListener / MouseMotionListener - KeyListener	

Teacher Specific Module

Lab1: Introduction to Object-Oriented Programming and Java Basics

1. Create a simple Java program to print "Hello,World!" to the console

2. To implement method overloading

3. To implement inheritance

Lab2:

1. Create java programme to implement interfaces

2. Create java programme to implement packages

Lab3: Advanced Java Programming Concepts

1. Write a Java program that demonstrates the use of exception handling.
2. Write a Java program to implement multithreading
3. Write a Java program to implement package

Lab4: GUI Programming with Java AWT

1. Create a simple AWT application with a Frame
2. Create a simple calculator using AWT controls and Frame

Readings:

197

1. "Head First Java" by Kathy Sierra and Bert Bates.O'Reilly 3rd edition
2. Java The Complete Reference-Eleventh Edition- Oracle Press- Herbert Schildt
3. Object Oriented Programming through Java, P Radha Krsihna
4. https://www.tutorialspoint.com/java/

Suggested Readings:
1. "Clean Code: A Handbook of Agile Software Craftsmanship" by Robert C. Martin
2. "Java Threads" by S

KU3DSCCSC202: DIGITAL SYSTEMS

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
3	DSC	200-299	**KU3DSCCSC202**	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4	0	-	30	70	100	2hrs.

Course Description:

This course introduces the principles of digital systems, covering fundamental concepts of digital and analog systems and their advantages. It includes basic logic operations, number systems, Boolean algebra, and the simplification of Boolean expressions. The course also explores combinational and sequential logic circuits, such as adders, subtractors, encoders, decoders, multiplexers, flip-flops, counters, and shift registers. Emphasis is placed on practical applications and design considerations.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Differentiate between digital and analog systems and articulate the advantages of digital systems.	U

2	Demonstrate basic logic operations and convert between various number systems used in digital electronics	A
3	Use Boolean algebra and logic gates to design and simplify digital circuits.	A
4	Design and analyze combinational circuits, including adders, subtractors, encoders, decoders, multiplexers, and demultiplexers.	C, An
5	Comprehend the functioning of sequential circuits, including flipflops, counters, and shift registers, and apply this knowledge to real-world digital system designs.	U,A,C

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**INTRODUCTION TO DIGITAL SYSTEMS**	12
	1	Digital and Analog Systems	
		a) Definition and comparison	
		b) Advantages of digital systems over analog systems	
	2	Introduction to basic logic operations	
		a) NOT , AND, OR Operations	
	3	Number Systems	
		a) Number systems	

200

		b) Number base conversion	
	4	Binary codes	
		a) BCD, Gray code	
		b) Alphanumeric codes	
		c) Error detecting codes	

2		**BOOLEAN ALGEBRA AND LOGIC GATES**	
	1	Basic Definitions	12
	2	Basic theorems and Properties of Boolean algebra	
	3	Simplification of Boolean expressions	
	4	Karnaugh maps for simplification	
	5	Digital Logic gates	

3		**COMBINATIONAL CIRCUITS**	
	1	Basic combinational logic circuits	12
	2	Combinational Circuits	
		a) Adders and Subtractors	
		b) Encoders & Decoders	
		c) multiplexers and demultiplexers	
	3	Parity generators / checkers	

4		**SEQUENTIAL LOGIC CIRCUITS**	
	1	**Flip-Flops and Latches**	
		a) SR, JK, D, T flip-flops, Master slave flip flop	12
	2	**Counters**	
		a) Synchronous and asynchronous counters	
		b) Ripple counters, up-down counters	
	3	**Shift Registers**	

5	Teacher Specific Module	
	Directions	
	Conduct hands on training on digital devices and their working.	12

Essential Readings:

1. Digital Fundamentals, Floyd and Jain, 8thEdn, Pearson Education.

2. Fundamentals of Digital Circuits" by A. Anand Kumar

3. Digital Design" by M. Morris Mano and Michael D. Ciletti

Suggested Readings:

1. Digital Logic and Computer Design, M Morris mano

M O D U L E	U N I T	DESCRIPTION	HOURS
1		**MODULE TITLE:** INTRODUCTION TO DATAANALYTICS	**15**
	1	Data analytics definition-steps in data analytics-types of data analytics-Career Opportunities in Data Analytics	
	2	Importance of data analytics	
	3	Overview of data analytics process	
	4	Types of data analysis	

2		**MODULE TITLE: PROCESS OF DATAANALYSIS**	**15**
	1	2. Define the Problem 3. Collect Data 3. Data Cleaning 4. Analyzing the Data 5. Data Visualization 6. Presenting Data	
	2	Sources of data -primary and secondary data- Data types -structured and unstructured data	
	3	Data collection methods -- Methods to collect primary and secondary data	
	4	Data storage and management -what is data management-need of data management-importance and types of data management	

3		**MODULE TITLE:** DATACLEANING	**15**
	1	Data preprocessing techniques - Data cleaning -Dimensionality reduction -Feature engineering: Handling a large amount of data (sampling data)-Data transformation:	
	2	Handling missing data - Effective Strategies for Handling Missing Values in Data Analysis	
	3	Dealing with outliers - Trimming/Remove the outliers- Quantile Based Flooring and Capping- Mean/Median Imputation- Visualizing the Data after Treating the Outlier	

	4	Features of Python for data analysis- Syntax-Keywords in Python-Comments in Python-Python Variables	
4		**MODULE TITLE :** PANDA FOR DATA ANALYSIS	15
	1	Python Data Types-Strings-Numbers-Booleans-Python List-Python Tuples-Python Sets-Python Dictionary	
	2	Operators in Python -Arithmetic operators Comparison Operators-Logical Operators-Bitwise Operators-Assignment Operators- Control structures -branching and looping.	
	3	Pandas Library in Python-Why Python Pandas used for-data analysis Panda series.-how to create series. Data Frames- create data frame using DataFrame () pandas Read CSV-pandas analyzing data- head() and tail() functions.	
	4	Data set cleaning- removing Empty cells-dopna() -removing Data in wrong format- to_datetime()-removing Wrong data-loc() and drop(). removing Duplicates-duplicated(). Data Visualization using pandas-panda plot().	

5	**Teacher Specific Module**	
	Teacher can suggest activities on following titles	
	1. write a python code for arithmetic operations 2. write a python code for sorting a list of numbers. 3. Write a program to check whether a given number is even or odd. 4. Create a program to calculate the factorial of a given number. 5. Write a program to check if a given number is a prime number. 5. Write a Pandas program to create the mean and standard deviation of the data of a given Series. 6. Write a Pandas program to detect duplicates using duplicated() method. 7. Write a Pandas program to create a Pivot table and find the region wise total sale. 8. Write a Pandas program to split the following data frame into groups based on school code. Also check the type of Group By object. **Test Data:**	15

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE**: Introduction to OOP and C++ Basics	15
	1	Procedural vs Object-Oriented Programming	
	2	Features of OOP: Encapsulation, Inheritance, Polymorphism, Abstraction	
	3	Structure of a C++ program,	
	4	Basic I/O, data types, operators in detail	
2		**MODULE TITLE: Classes and Objects**	15

	1	control structures (branching and looping)	
	2	Defining classes and creating objects	
	3	Member functions, constructors and destructors	
	4	Operator overloading: unary and binary operators (mention only).	

3	MODULE TITLE : Inheritance and Polymorphism	15
	1 Friend functions and classes	
	2 Types of inheritance: Concept and Need for Inheritance Reusability	
	3 Types of inheritance - single, multiple, multilevel- explanation with example programme	
	4 Hierarchical, hybrid explanation with example programme	

4	MODULE TITLE : Virtual Functions and Polymorphism	15
	1 Compile-time Polymorphism: Function Overloading-Operator Overloading (Explain with program)	
	2 Runtime Polymorphism: Virtual functions-Pure virtual functions and abstract classes	
	3 Abstract Classes and Interfaces- Creating interfaces using abstract classes	

5	Teacher Specific Module	
	1.Write a C++ program to print "Hello, World!". 2, Write a program to perform arithmetic operations using functions. 3. Write a program to define a class Student with data members and display their details using a member function. 5. Write a program to illustrate the use of constructors and destructors. 6. Write a program to implement **single inheritance**. 7. Write a program for **multiple inheritance**. 8. Write a program demonstrating **multilevel inheritance**.	15

210

9. Write a program using **hierarchical inheritance**.
10. Write a program to implement **function overloading**.
11. Write a program to illustrate **runtime polymorphism** using virtual functions.
12. Write a program to demonstrate **abstract class** using pure virtual functions.

KU3DSCCSC205: RDBMS

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
3	DSC	200-299	KU3DSCCSC205	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2		35	65	100	1.5 hrs.

Course Description:

This course offers to acquire basic conceptual background necessary to design and develop simple database system, Relational database mode and to write good queries using a standard query language called SQL.

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Describe basic concepts of database system	U
2	Design a Data model and Schemas in RDBMS	U, A
3	Competent in use of SQL	U, A, C
4	Analyze functional dependencies for designing Database	U, A, C

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE 1 :Introduction to DBMS**	15
	1	Introduction to DBMS– Data and Information - Database – Database Management System – Advantages	
	2	View of data in DBMS	
	3	Data Models, Database users and Administrator (DBA)	
	4	Concept of RDBMS, Features of RDBMS Difference between DBMS and RDBMS	
2		**MODULE 2 :Introduction to RDBMS**	15
	1	Terminologies: Relation, attribute, domain, Tuple, Entities, Degree	
	2	Key Constraints Super keys - Candidate keys - Primary keys and foreign key for the Relations	
	3	Relational Algebra Operations, RDMS-advantages and disadvantages	
	4	Relational Calculus – Domain Relational Calculus	
3		**MODULE 3: Normalization and basic SQL**	15
	1	Normalization – 1NF – Functional Dependency - 2NF-Transitive dependency- 3NF – BCNF – Database Security	
	2	SQL- Data types	
	3	DDL, DML, DCL, TCL Commands	
	4	Select Statement with Clauses-Where, Having, Orderby, groupby	
	5	SQL Operators- Relational, Logical, Like, Between, IN operator	

214

4		MODULE 4: Functions in SQL	
	1	Aggregate functions: avg, count, min, max, sum,count(*)	
	2	String Functions: concat, instr, mid, length, strcmp, trim, ltrim, rtrim MathFunctions: abs, ceil, floor, mod, pow, sqrt	15
	3	Join types – Inner Join, left-right- Outer Join, and self-Join	
	4	Sub-queries, view, Character functions-upper, lower, initcap etc	

5	Teacher Specific Module	
	Directions	
	1. Create table and implement various DDL commands 2. Create table and implement various DML commands 3. Create table and implement various aggregate functions. 4. Create table and implement various DDL commands 5. Create table and implement various clauses and pattern matching commands. 6. Create table and implement different types of joins	15

Essential Readings:

1. Abraham Silberchatz, Henry F. Korth, S. Sudarshan, "Database System Concepts", McGrawHill 2019, 7th Edition.

2. Alexis Leon & Mathews Leon, "Fundamentals of DBMS", Vijay Nicole

Publications 2014, 2nd Edition.

3. Srivastava & Srivastava, "Relational Database Management System", New Age

KU3DSCCSC206:   INTRODUCTION TO MACHINE LEARNING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
3	DSC	200 -299	**KU3DSCCSC206**	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2		35	65	100	1.5hrs.

Course Description:

This course serves as an introduction to machine learning, a field of artificial intelligence that focuses on developing algorithms and models that enable computers to learn from and make predictions or decisions based on data. Students will learn the fundamental concepts, techniques, and applications of machine learning, including supervised learning, unsupervised learning, and evaluation methods.

Course Prerequisite: NIL

Course Outcoms:

CO No.	Expected Outcome	Learning Domains
1	Discuss on principles and concepts of machine learning.	U
2	Compare different types of machine learning algorithms and models.	A
3	Examine supervised and unsupervised learning techniques.	A
4	Implement machine learning algorithms using Python.	A/An
5	Appraise machine learning model performance.	E

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE**: **Introduction to Machine Learning**	15
	1	What is machine learning?	
	2	Types of machine learning (supervised, unsupervised, reinforcement learning)	
	3	Applications of machine learning	
	4	Tools and software for machine learning (Scikit-learn, TensorFlow)	

218

	1	Introduction to supervised learning
	2	Linear regression
	3	Logistic regression
	4	Decision trees and ensemble methods (Random Forest, Gradient Boosting)

3	MODULE TITLE : Unsupervised Learning		15
	1	Introduction to unsupervised learning	
	2	Clustering algorithms (K-means, Hierarchical clustering)	
	3	Dimensionality reduction techniques (PCA, t-SNE)	
	4	Instant based learning: K- Nearest Neighbor Learning Locally weighted Regression Radial Bases Functions – Case Based Learning.	

4	MODULE TITLE : PRACTICE ML WITH PYTHON		
	1	Introduction to Python for Machine Learning- advantages- libraries-Numpy, Pandas, sciPy, Scikit-Learn, Matplotlib, TensorFlow and PyTorch -mention their usage.	15
	2	Data set- Datatypes-Numerical-Categorical- Ordinal- Sources of different dataset.	
	3	Numpy functions for Mean-median-mode- Standard Deviation and Percentile .	
	4	Data distribution and visualization- using Matplotlib.-various types of charts with examples.	

5	Teacher Specific Module	
	Discussion on ML application in real life Practice sample ML programmes to implement 1. linear regression 2. Decision trees 3. K-Nearest Neighbors	15

Essential Readings:

1. Tom M. Mitchell, "Machine Learning", McGraw-Hill, 2010 .

2. Bishop, Christopher. Neural Networks for Pattern Recognition. New York, NY: Oxford

University Press, 1995

3. Introduction to Machine Learning with Python" by Andreas C. Müller and Sarah Guido

4. Online resources, research papers, and tutorials

3	2		35	65	100	1.5hrs.

Course Description:

This course provides a comprehensive introduction to Content Management Systems (CMS) and their role in managing digital content. Students will learn the fundamentals of CMS, its features, and how to implement and manage a CMS platform. The course covers the importance of CMS, types of CMS platforms, features and functionality, installation and configuration, content management best practices, and advanced CMS topics.

Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Identify the concept of Content Management System and its importance	U
2	Demonstrate proficiency in installing, configuring, and customizing WordPress for different website requirements Discuss on features and functionality of a CMS platform	U
3	Identify the steps to install, configure, and manage a CMS platform	U/A
4	Design and manage digital content using a CMS	A

222

5	Use CMS skills to real-world scenarios	A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

CO5	3	2	2	2			2

COURSE CONTENTS

Detailed Syllabus:

Module	Unit	Content	Hrs
I		**Introduction to Content Management Systems**	**15**
	1	Overview of Content Management Systems (CMS)	
	2	Importance and benefits of using CMS	
	3	Types of CMS platforms: Open-source vs. proprietary	
	4	Comparison of popular CMS platforms: WordPress, Joomla, Drupal	
		WordPress Fundamentals	
	1	Installation and setup of WordPress	
	2	Exploring the WordPress dashboard and interface	
II	3	Understanding WordPress themes and templates	**15**
	4	Customizing WordPress themes using HTML and CSS	

		Content Creation and Management	
III	1	Creating and publishing different types of content (posts, pages, media)	**15**
	2	Organizing content with categories and tags	
	3	Utilizing WordPress editor for content creation and formatting	
	4	Incorporating multimedia elements (images, videos, audio) into content	
	5	Managing comments and discussions on WordPress site	
IV		**Advanced WordPress Techniques**	**15**
	1	Implementing custom post types and taxonomies	
	2	Introduction to theme development with WordPress	
	3	Utilizing child themes for customization without affecting core themes	
	4	Introduction to WordPress APIs for extending functionality	
V		**Teacher specific module**	**15**
	1	Case Studies in WordPress Implementation	

2	Comparing WordPress with other popular CMS platforms such as Joomla and Drupal
	List of Experiments 1. **Installation of WordPress** • Installation and setup of WordPress • Exploring the WordPress dashboard and interface 2. **Adding a New Page:** • Experiment with creating a new page in WordPress. • Explore different page templates and formats. 3. **Customizing Themes:** • Experiment with changing themes in WordPress. • Customize colors, fonts, and layout using built-in customization options or CSS. 4. **Installing Plugins:** • Experiment with installing and activating different plugins. • Test plugins for functionality, such as SEO optimization, contact forms, or image galleries. 5. **Creating Custom Menus:** • Experiment with creating custom menus in WordPress. • Add, remove, and rearrange menu items to see how it affects site navigation. 6. **Adding Media:** • Experiment with adding images, videos, and audio files to your WordPress site.

6. WordPress Codex: https://codex.wordpress.org/
7. https://deanebarker.net/books/squirrel/

List of Experiments

1. **Installation of WordPress**
   - Installation and setup of WordPress
   - Exploring the WordPress dashboard and interface

2. **Adding a New Page:**
   - Experiment with creating a new page in WordPress.
   - Explore different page templates and formats.

3. **Customizing Themes:**
   - Experiment with changing themes in WordPress.
   - Customize colors, fonts, and layout using built-in customization options or CSS.

4. **Installing Plugins:**
   - Experiment with installing and activating different plugins.
   - Test plugins for functionality, such as SEO optimization, contact forms, or image galleries.

5. **Creating Custom Menus:**
   - Experiment with creating custom menus in WordPress.
   - Add, remove, and rearrange menu items to see how it affects site navigation.

6. **Adding Media:**
   - Experiment with adding images, videos, and audio files to your WordPress site.

3	2	-	35	65	100	1.5 Hrs

Course Description:

Computer databases typically store aggregations of data records or files that contain information, such as sales transactions, customer data, financials and product information. Databases are used for storing, maintaining and accessing any sort of data.

They collect information on people, places or things.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Summarize and exemplify fundamental nature and characteristics of database systems	U
2	Model real word scenarios given as informal descriptions, using Entity Relationship diagrams	U
3	Implement relational model using query languages	U, A, C
4	Use normalisation techniques to design database.	U, A
5	Identify Big Data Concepts	U

__Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)__

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		MODULE1: Database concept	
	1	Introduction – purpose of Database, Applications of Database, DBMS, DBMS software	15
	2	View of Data, Data Models, Transaction management	
	3	Database architecture – Storage manager-Query Processor	
	4	Database Administrator, Data Base Users	

2		MODULE 2: E-R Model	
	1	E-R model- Basic concepts, entity set & attributes.	15
	2	Relationships and constraints, cardinality, participation, notations, Mapping Constraints; Keys; Primary, Foreign, candidate.	
	3	E-R design issues, E-R diagram; Weak entity set; Extended E-R features: generalization and specialization	
	4	Concept Design - Conceptual design for University enterprises	

3		MODULE 3: Relational model and SQL	15
	1	Relational model – Structure of Relational database, Integrity constraints.	
	2	Relational Algebra -Fundamental operations , Relational calculus , Tuple and domain calculus	

229

	3	SQL: database languages; DDL- create, alter, drop, truncate; DML-Insert, Select, update, Delete; DCL, TCL, SQL Functions, Data types in SQL; Creation and deletion of database and user	
	4	SQL queries on single and multiple tables, Nested queries (correlated and non-correlated), Aggregation and grouping.	

4		MODULE 4: Join and Normalization	
	1	SQL Join Operations in Detail, SQL Views, Triggers, Sequences.	15
	2	Normalization- Introduction, Normal forms – 1NF, 2NF, 3NF and BCNF, functional dependency	
	3	Cloud database an over view- working of cloud databases-Types of cloud databases--Introduction to AWS-Main features and Advantages	
	4	Big Data- Introduction to Hadoop-Building blocks and components-Architecture	

5	Teacher Specific Module	
	1. Create table and implement various DDL commands 2. Create table and implement various DML commands 3. Create table and implement various aggregate functions. 4. Create table and implement various DDL commands 5. Create table and implement various clauses and pattern matching commands. 6. Queries to implement various string functions 7. Create table and implement different types of joins	

Essential Readings:

1. Database System Concepts; Silberschatz, Korth and Sudarsan, 5th Edn; McGraw Hill.

2. The Database Book: Principles and Practice Using MySQL; Gehani; University Press.

3. Database Management Systems Application, Kogent Learning, Solutions Inc, Dreamtech Press 2014, ISBN-978-93- 5119-476-7.

4. Database System Concepts, Kortli FIenery, Tata McGraw Hill Education, 6"' Edition ,ISBN - 13:978-93-329-0135-4

Suggested Readings:

1. Fundamentals of Database systems, E. Navathe, 7thedn, Pearson Education.

2. Introduction to data base systems ITL Education Solutions Limited

3. DBMS and ORACLE, Dr. S.B Kishor, 2nd Ed, DAS GANU Prakashan.

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE: Elementary Data Organization**	15
	1	Data Structures	
		a) Data Structure Classification	
		b) Operations of Data Structures	
	2	Linear Arrays	
		a) operations	
		b)Application	
		c)Polynomial- Representation with arrays	
		d)Polynomial addition	
	3	**Stack**	
		a) Operations	
		b) Application	
		c)Evaluation of post fix expression	
	4	Queue	
		a) Operations	
		b) Printer Queue as application,	
		c) Circular Queue	
		d)Deque	
		e)Priority Queue	

		Linked Lists: Definition, Representation of Linked List in memory, Traversing Linked List, Searching a linked list, Memory Allocation and Garbage Collection , Insert into a linked list, Deletion from a linked list; Header Linked Lists; Two-way Lists – Operations.	

2		**MODULE TITLE: Trees**	
	1	Binary Trees, Complete Binary trees, Extended Binary trees; Representing Binary trees in memory, Traversing Binary trees,	15
	2	Binary search trees – Searching and inserting in Binary Search Trees, Deleting in a Binary Search Tree.	
	3	Heap – Heap sort,	
	4	Huffman's Algorithm	
	5	General Trees – Computer representation of general trees	

3		**MODULE TITLE: Graphs**	
	1	Graph Theory terminology; Sequential Representation of Graphs – Adjacency Matrix, Path Matrix	
	2	Operations on graph	15

234

		a) traversing searching	
		b) inserting	
		c) deleting	
	3	Breadth- First Search and Depth First Search	

4	**MODULE TITLE: Design and Analysis of Algorithms**		
	1	From Problems to Programs - Algorithms, Pseudo Language and Stepwise Refinement.	
		a) Abstract Data Type definition, Data Structures and Abstract Data Types	15
	2	Measuring the Running Time of a Program	
		a) Asymptotic Notations – Big O, Omega,Theta	
	3	Search: Linear and Binary search; comparison of searching algorithms.	
		Sort: Insertion, bubble, selection, quick and merge sort; Comparison of Sort algorithms	

5	**Teacher Specific Module**	
	Directions	
	1. Arrays • Program to insert, delete, search, and display elements in an array. • Program to find the largest and smallest element in an array. • Program to reverse an array. **2. Strings** • Program for string operations: length, copy, concatenate, compare. • Program to check for palindrome. • Program to count vowels and consonants. **3. Linked List** • Singly linked list: insert (beginning, end, middle), delete, display. **4. Stacks** • Stack using arrays. • Stack using linked list. **5. Queues** • Queue using arrays (linear).	15

- Queue using linked list.

6. Recursion
- Factorial of a number.
- Fibonacci series using recursion.

7. Searching and Sorting
- Linear search.
- Binary search.
- Bubble sort.
- Selection sort.

8. Tree
- Binary tree creation and traversal (inorder, preorder, postorder).
- Binary search tree (BST) operations: insert, delete, search.

Essential Readings:

1. Schaum's Outline of Theory and Problems of Data Structures – SymourLipschutz

   Mc-Graw Hill Book Company.

2. Data Structures and Algorithms- Alfred V. Aho, John E. Hopcroft, Jeffrey

   D.Ullman – Pearson Educatio

Suggested Readings:

1. Data Structures and Algorithms: Concepts, Techniques and Applications; GAV Pai, McGraw Hill, 2008.

2. Data Structures in C, Achuthsankar and Mahalekshmi, PHI, 2008

3. Fundamentals of Data structures in C++, 2nd Edn, Horowitz Sahni, Anderson, Universities Press

4. Classic Data structures, Samanta, Second Edition, PHI

Course Description:

An operating system is the most important software that runs on a computer. It manages the computer's memory and processes, as well as all of its software and hardware. It also allows you to communicate with the computer without knowing how to speak the computer's language.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Outline various concepts and features of Operating systems.	U
2	Compare various operating systems with respect to characteristics and features	U
3	Identify algorithm of CPU Scheduling, Memory Scheduling and disk scheduling.	U, A
4	Explain Linux operating system commands	U, A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		MODULE1: Introduction to OS	
	1	Introduction, structure of Operating Systems, Different types of Operating systems-Batch Processing System, Multi programming system, Time Sharing System, Real Time System, Distributed system	12
	2	Functions of operating system-Process management, Main memory management, File management, I/O system management, Secondary storage management	
	3	User mode and Kernel mode, System Calls (Introduction only), Operating System Design and Implementation approaches	
	4	Operating System Design and Implementation approaches, Operating System Structures - simple, layered, micro Kernel	
2		MODULE 2: Process Management	
	1	Processes: Process Concept–The Process, Process State , Process Control Block	12
	2	Process Scheduling–Schedulers, Context Switch-CPU Scheduling: Basic Concepts–CPU scheduler	
	3	Pre-emptive and non pre-emptive scheduling, Dispatcher-Scheduling criteria	
	4	Scheduling algorithms–FCFS, SJFS, Priority Scheduling, Round Robin Scheduling	
3		MODULE 3: Deadlock, Memory Management and Disk Scheduling	**12**

1	Deadlocks: Characterization – necessary conditions – Resource allocation graph – - Deadlock prevention – mutual exclusion, hold and wait, no pre-emption, circular wait	
2	Memory: Contiguous Memory Allocation, Segmentation, Paging, Demand Paging	
3	Page Replacement - Basics, FIFO Page Replacement, Optimal Page Replacement, LRU Page Replacement	
4	Mass Storage Structure: Disk Structure-Disk Scheduling: FCFS Scheduling, SSTF Scheduling, SCAN Scheduling, C-SCAN Scheduling, LOOK Scheduling, C-LOOK Scheduling	

4	MODULE 4: Introduction to Linux and basic commands	
1	History of Unix and Linux, Linux Overview, Processes in Linux	12
2	Memory management in Linux, I/O in Linux, Linux file system, security in Linux	
3	Linux commands: pwd, cd, absolute and relative paths, ls, mkdir, rmdir, , chmod nice-**Package Management)-** apt update apt upgrade apt update apt upgrade apt install package apt remove package	
4	vi editor, security by file permissions	

5	**Teacher Specific Module**	
	Directions	
	Installation of OS **Practice various linux commands in lab**	12

Essential Readings:

1. "Operating System Concepts" by Abraham Silberschatz, Peter B. Galvin, and Greg Gagne.

2. "Modern Operating Systems" by Andrew S. Tanenbaum.

3. "Operating Systems: Internals and Design Principles" by William Stallings.

4. "The Linux Programming Interface: A Linux and UNIX System Programming Handbook" by

Michael Kerrisk.

5. Unix and shell Programming Behrouz A. Forouzan, Richard F. Gilberg.Thomson

Suggested Readings:

1. https://www.geeksforgeeks.org/cpu-scheduling-criteria/
2. https://www.geeksforgeeks.org/conditions-for-deadlock-inoperating-system/?ref=lbp

3. Linux System Programming, Robert Love, O'Reilly, SPD
4. Dhananjay M. Dhamdhere, Operating Systems A Concept Based Approach, 3rd Ed, TMH

V SEMESTER

KU5DSCCSC 301 : SOFTWARE ENGINEERING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
5	DSC	300-399	KU5DSCCSC301	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4	-	-	30	70	100	2hrs.

Course Description:

The course provide experience on various processes used in Software industry for the development of a software product. The course enable attain knowledge in testing and maintenance of software products.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Identify various phases of software development.	U
2	Select appropriate process model depending on the user requirements.	A
3	Identify various processes used in all the phases of the product.	U
4	Design software projects	A

Mapping of Course Outcomes to PSOs

	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5	PSO 6	PSO 7
CO 1	3			2			2
CO 2	2	3	3		2	2	
CO 3	3		2				
CO 4	3	2	2	2		2	2

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**INTRODUCTION TO SOFTWARE ENGINEERING**	12
	1	a)Program and Software	
		b) Definition, program versus software	
		c) software process	
	2	software characteristics	
	3	a) Product and Process	
		b) brief introduction about product and process	
		c) software process and product matrices	
	4	Software life cycle models – Definition, selection of the life cycle model	
		a) waterfall model	
		b) increment process model	
		c) evolutionary process model	

		SOFTWARE REQUIREMENT ANALYSIS AND SPECIFICATION	
	1	a)Requirements engineering,	

		b)types of requirements	12
	2	feasibility studies	
	3	a) requirement elicitation	
		b) requirement elicitation	
		c) various steps of requirement analysis	
	4	a) requirement documentation	
2		b) requirement validation	

3		**SOFTWARE DESIGN**	
	1	a) Definition and various types of design	12
		b) Objectives and importance of design phase	
	2	a) modularity	
		b) strategy of design	
	3	a) Function-oriented design. Objected Oriented Design – Analysis, design concept	
		b) design notations and specifications, design methodology	

4		**SOFTWARE TESTING**	
	1	a)What is testing?, Why should we test?, who should do testing	12
		b) Test case and Test suit	
	2	a)verification and validation definition and comparison	
		b)alpha beta and acceptance testing, functional testing	
		c)techniques to design test cause effect	
		d)cases Boundary value analysis, equivalence class testing, decision table based testing,	
	3	a) graphing techniques	
		b)structural testing, path testing, cyclomatic complexity, mutation testing, levels of testing, unit testing, integration testing, system testing, validation testing	

5	**Teacher Specific Module**	
	Assignmet to implement various software development life cycle to develop a sample software model	

Essential Readings:

1. Software Engineering (Third Edition), K K Aggarwal, Yogesh Singh, New age International Publication

2. An integrated approach to software Engineering (Second Edition), Pankaj Jalote, Narosa Publishing House -

3. Software Engineering (Seventh edition), Ian Sommerville – Addison Wesley.

KU5DSCCSC302: PYTHON PROGRAMMING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
5	DSC	300-399	KU5DSCCSC302	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2		35	65	100	1.5hrs.

Course Description:

This course includes an overview of the various tools available for writing and running Python, and gets students coding quickly. It also provides hands-on coding exercises using commonly used data structures, writing custom functions, and reading and writing to files.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Identify basic features of python	U
2	Implement OOPs concepts in programming	A
3	Use Arrays, and Data structures in programming	A/An
4	Implement database connectivity in programming	A/An
5	Create an application with the support of graphics in Python	U/C

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**BASIC ELEMENTS AND CONTROL STATEMENTS**	15
	1	a) Features of Python, Different Methods to Run Python,	
		b) Basic Elements (Objects, Expressions, Numerical Types, Strings, Variables)	
		c) Comments, Indentation in Python	
		d) Input and Output in Python	
	2	Import function	
	3	a) Branching (if, else, elif)	
		b) Iteration (while, for)	
		c) Range and enumerate functions	
	4	a)Tuples, Lists, Sets, Dictionaries	
		b)Built-in methods of lists	
		c)Sets and dictionaries	
		d)Mutable and Immutable Objects	

		FUNCTIONS, MODULES AND EXCEPTION HANDLING	
	1	c)Functions Definition, Function Calling, Function Arguments (Required, Keyword, Default)	

247

		d)Recursion	15
	2	a) Modules, Built-in Modules	
		b) Creating Modules	
	3	d) File Handling	
		e) Opening, Closing, Writing and Reading files	
2	4	c) Exceptions	
		d) Built-in Exceptions (IndexError, OverflowError, ZeroDivisionError, RuntimeError)	
		e) Exception Handling	

3	**OBJECT ORIENTED PROGRAMMING, NUMPY ARRAYS AND DATA VISUALIZATION**		
	1	a)Class Definition	15
		b)Object Creation	
		c)Built-in Attribute Methods	
		d)Object Oriented Programming Features of Python	
	2	c) Arrays in Python	
		d) Numpy Module, ndarray, Creating Arrays (array, zeros, ones, empty, linspace, arrange, random)	
	3	c) Two-Dimensional Array, Indexing, Slicing, Iterating, Copying, Splitting	
		d) Shape Manipulation (reshape, transpose, resize)	
		e) Arithmetic Operations on Arrays	
	4	a) Data Visualization in Python matplotlib Module, pyplot, plot(), scatter, bar charts, Formatting, figure(), subplot(), text(), xlabel(), ylabel(), title(),	
		b) Plotting Simple Mathematical Functions (sin x, x^2)	

4	**CONNECTING TO DATABASE AND GUI PROGRAMMING**		
	1	a)Connecting to a Database	15
		b)Basic Operations on Database (Crater, Insert, Update, Delete)	
		c)Fetching Data from a Database	
	2	e)Transaction Control	
	3	c)GUI Programming using Tkinter	

248

		d)Tkinter Widgets (Label, Message, Entry, Text, Button, tkMessagebox, RadioButton, Checkbutton, Listbox, Menu, Menubutton, Scale, Scrollbar, Canvas)	
		e)Layout Managers	

5	**Teacher Specific Module**	
	Directions	
	1. **Write a program to perform basic arithmetic operations (addition, subtraction, multiplication, division) on two numbers.** 2. **Develop a function that determines if a given year is a leap year.** 3. **Write a program that reverses a number and calculates the sum of its digits.** 4. **Develop a function to check if a given string is a palindrome.** 5. **Perform operations like removing duplicates, finding the second-largest element, and reversing a list without using the reverse() method.** 6. **Implement a class to calculate the area and perimeter of a rectangle..** 7. **Write programs to perform linear and binary search on a list of numbers.** 8. **Write a program to read from and write to text files.** 9. **Develop a program to perform matrix multiplication.** 10. **Develop a class to simulate a bank account with methods to deposit, withdraw, and check balance.**	15

Essential Readings:

1. Taming Python By Programming, Dr. Jeeva Jose, Khanna Publishing

2. Introduction to Computation and Programming Using Python with Application to Understanding Data - John V. Guttag, PHI (2016)

3. Introduction to Computer Science using Python - Charles Dierbach, Wiley (2015)

KU5DSCCSC 303 : WEB TECHNOLOGY

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
5	DSC	300-399	KU5DSCCSC303	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2	-	35	65	100	1.5 Hrs

Course Description:

Web technology refers to the means by which computers communicate with each other using mark-up languages and multimedia packages. It gives us a way to interact with hosted information, like websites. Web technology involves the use of hypertext mark-up language (HTML) and cascading style sheets (CSS).

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Discuss various components in web technology and WWW	U
2	Use HTML Forms and CSS Styling in designing documents.	U,A
3	Develop interactive Webpages using Javascript	U, A, C
4	Design a web document with server-side scripting using PHP	U, A, C
5	Identify the basics of AJAX	U

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		MODULE1: Introduction to Web	
	1	Introduction to Internet and WWW, Evolution of the Internet and World Wide Web, Web Basics	15
	2	Static Vs Dynamic web pages, Client-Side Scripting versus Server-Side Scripting, World Wide Web Consortium (W3C)	
	3	Web hosting, Types of web hosting, Hosting Space	
	4	Domain Name Registration, Free Hosting, Responsive Web designing	

2		MODULE 2: Introduction to HTML and CSS	
	1	Introduction to HTML, Editing HTML5, W3C HTML5 Validation Service, Headings, Linking, Images, Special Characters and Horizontal Rules	15
	2	Lists, Tables, Forms, HTML5 Form Input types, input and data list Elements and autocomplete Attribute, Frames and frameset	
	3	Introduction to Cascading Style Sheets(CSS)- Concept of CSS ,Creating Style Sheet , CSS Properties ,CSS Styling(Background, Text Format, Controlling Fonts), CSS Id and Class	

| | 4 | Working with block elements and objects ,Working with Lists and Tables | |

3	MODULE 3: Scripting with JavaScript		**15**
	1	Introduction to JavaScript , operators	
	2	Arrays-declaring and allocating arrays, examples using arrays	
	3	Functions-Function Definitions, Notes on Programmer-Defined Functions, scope rules and recursion,	
	4	Document Object Model, Objects-math, string and date objects, dialog boxes	

4	MODULE 4: PHP and Ajax Enabled Rich Internet Applications		
	1	Introduction to PHP Evaluation of Php, Basic Syntax, Defining variable and constant, Php Data type, Operator and Expression	*15*
	2	Function What is a function, Define a function, Array -Creating index based and Associative array Accessing array, Element Looping with Index based array	
	3	Looping with associative array using each () and foreach(), Handling Html Form with Php Capturing Form, Data Dealing with Multi-value filed	
	4	Introduction to AJAX, Traditional Web Applications vs. Ajax Applications, Traditional web applications, Ajax applications, Rich Internet Applications (RIAs) with Ajax, History of Ajax	

5	**Teacher Specific Module**	
	Directions	
	Sample Lab List 1. Create a webpage with HTML describing your department. Use paragraph and list tags. Apply various colours to suitably distinguish key words. Also apply font styling like italics, underline and two other fonts to words you find appropriate. Also use header tags. Insert appropriate images. 2. Design a webpage showing the mark list of student.	15

253

3. Design a website for your college .Include frames, links, and lists.

4. Design a Registration form.

5. Write a javascript code using functions to perform arithmetic operations two numbers

6. Write a javascript code to sort and reverse arrayelements

7. Javascript code to find the factorial of a number using recursion.

8. Javascript code to show the working of math object (Use at least 3 math functions).

9. Javascript code to display the current date and time

10. Javascript code to illustrate Dialog boxes

Essential Readings:

1. Internet & World Wide Web How to Program, 5/e – Paul J Deitel, Harvey M Deital, AbbaeyDeital

2. Julie C. Meloni, HTML and CSS in 24 Hours, Sams Teach Yourself (Updated for HTML5 and CSS3), Ninth Edition

3. Javascript The Definite Guide David Flanagan OR'EILLY

4. Programming in PHP, O'Reilly

Suggested Readings:

1. Mastering HTML, CSS &Javascript Web Publishing Paperback,2016 - by Laura Lemay, Rafe Colburn & Jennifer Kyrnin , BPB Publications
2. HTML & CSS: The Complete Reference, Fifth Edition - Thomas a Powell, Tata McGraw Hill

KU5DSCCCSC 304 : DATABASE ADMINISTRATION

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
5	DSC	300 -399	KU5DSCCSC304	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4	0		35	65	100	1.5 Hrs

Course Description:

This course attempts to develop skills in the area of database administration. After learning this course students would be able to design, edit, manage and maintain databases, and administer them professionally.

Course Prerequisite: Nil

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Execute SQL queries related to Transaction Processing & Locking using concept of Concurrency control.	U /A
2	Demonstrate use of Database Object.	U
3	Identify database implementation life cycle and information system.	U
4	Use various administrative techniques in database management .	A

Mapping of Course Outcomes to PSOs

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE: Advanced SQL**	15
	1	Transactional Control: Commit, Save point, Rollback	
	2	DCL commands : Grant and Revoke	
	3	Types of locks -Row level locks -. Table level locks-. Shared lock -. Exclusive lock - Deadlock	
	4	Synonym : Create synonym(views) -Sequences	
	5	Create and alter sequences Index : Unique and composite - Views : Create/Replace, Update and alter views	
2		**MODULE TITLE: Database Design And Implementation**	15
	1	Database Application Life Cycle - Conceptual Database application	

	2	Design -Retrieve transaction -Update Transaction - Mixed Transaction	
	3	Logical and Physical Database Design - Response Time	
	4	Space Utilization - Transaction Throughput	

3	**MODULE TITLE: Transaction Processing**		**15**
	1	Transaction concepts - Concurrency	
	2	Methods for Concurrency control	
	3	Locking Methods -Timestamp methods - Optimistic methods	

4	**MODULE TITLE :Database Administrator**		
	1	Types of Database Users- User Creation and management	15
	2	Tasks of a Database Administrator- Submitting Commands and SQL to the Database	
	3	About Database Administrator Security and Privileges -Database	
	4	Administrator Authentication - Creating and Maintaining a Password File - Data Utilities	

5	**Teacher Specific Module**	
	Directions	
	Use appropriate teaching methodologies and evaluation metrics related with the topics.	15

Essential Readings:

1. Database Systems Concepts, design and Applications

   Singh, S. K. Pearson Education, New Delhi, 2012

   2. An Introduction to Database Systems Date, C. J. Pearson Education, New Delhi, 2012

Course Description:

This course introduces basic methods for the design and analysis of efficient algorithms emphasizing methods useful in practice. Different algorithms for a given computational task are presented and their relative merits evaluated based on performance measures. The following important computational problems will be discussed: sorting, searching, elements of dynamic programming and greedy algorithms.

Course Prerequisite: NIL
Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Compare the complexity of algorithm.	A
2	Identify various programming Paradigm.	U/A
3	Design the appropriate Algorithm for a given problem.	A
4	Use the various types of Algorithms to develop programmes	A/An

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

4	0		30	70	100	2hrs.

Course Description:

This course serves as an introduction to the fascinating and rapidly evolving field of Artificial Intelligence (AI) and Machine Learning (ML). Designed for students with varying levels of background knowledge, the course provides a comprehensive overview of fundamental concepts, techniques, and applications in AI and ML.

Course Prerequisite: NIL
Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Discuss the concept of Artificial Intelligence and problem solving	U
2	Identify advanced problem solving paradigms and knowledge representation.	U /An
3	Describe the basic machine learning concepts	U
4	Relate how neural networks are used to solve various classification problems.	A/E
5	Examine deep neural networks and its applications.	A/E

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE: introduction to artificial intelligence**	12
	1	Introduction To Artificial Intelligence: Definition – Future of Artificial Intelligence	
	2	Intelligent Agents: Agents and Environments, The Concept of Rationality, The Nature of Environments, The structure of Agents	

268

	3	Problem solving by Searching: Heuristic search and state space search	
	4	Techniques for Heuristic Search, State Space Search	
	5	Applications of Search Techniques in Game Playing- Minimax strategy and Alpha Beta Pruning, and Planning	

2	MODULE TITLE: Knowledge Representation		
	1	Knowledge Representation: Logical Agents	
	2	Propositional and first order Predicate logic	12
	3	Using First-order logic, Inference in First-order logic, forward and Backward Chaining	
	4	Probabilistic reasoning	

3	MODULE TITLE : Introduction to Machine Learning		
	1	Concept of learning, different types of learning; supervised learning, unsupervised learning, reinforcement learning- Measuring classifier performance, Confusion matrix	12
	2	Supervised Learning: Introduction, SVM, learning multiple classes, model selection and generalization, linear regression and feature selection, Bayesian and Decision Tree learning.	
	3	Unsupervised Learning: Introduction, clustering; mixture densities, kmeans clustering, expectation maximization algorithm, spectral and hierarchical clustering	
	4	Dimensionality reduction; principal component analysis	

4	MODULE TITLE: Introduction to Artificial Neural Network		
	1	Understanding brain, perceptron, Multi-Layer perceptron, general architecture of artificial neural network, feed forward and backpropagation,	12
	2	Linear and nonlinear activation functions for binary and multi class classification.	
	3	Introduction to Deep Learning: Fundamentals of deep learning, Existing Deep neural networks, Regularization for Deep Learning, Optimization for Training Deep Models	
	4	Introduction to Convolutional Networks, Classification and segmentation using CNN, Sequence Modelling using Recurrent Nets, overview of LSTM, Generative adversarial network.	

5	Teacher Specific Module	
	Directions	
	Teacher can adopt suitable methodologies and evaluation metrics to identify real world problems connected with the topics.	12

4	0	-	30	70	100	2hrs.

Course Description:

This course provides an introduction to the principles and techniques of digital image processing. It covers the basics of digital images, including their representation and types, as well as fundamental steps in image processing such as acquisition, enhancement, restoration, and compression. The course also explores digital image fundamentals, including visual perception, sampling, quantization, and pixel representation. Additionally, students will learn about basic mathematical tools used in image processing, such as matrix operations, arithmetic operations, logical operations, and geometric operations.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Distinguish between different types of images and image file formats.	U,A

2	Identify fundamental steps in digital image processing, including image acquisition, enhancement, restoration, and compression.	U, A

3	Discuss digital image fundamentals, including elements of visual perception, image sampling, quantization, and pixel representation.	U
4	Develop proficiency in basic mathematical tools used in image processing, such as matrix operations, arithmetic operations, logical operations, and geometric operations.	A
5	Use various image enhancement techniques, including spatial domain methods, spatial filtering, frequency domain methods, and noise reduction techniques.	A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4	0	-	30	70	100	2 hrs.

Course Description:

In the age of big data, data science (the knowledge of deriving meaningful outcomes from data) is an essential skill that should be equipped by software engineers. It can be used to predict useful information on new projects based on completed projects. This course provides a practitioner's approach to some of the key techniques and tools used in Big Data analytics. Knowledge of these methods will help the students to become active contributors to the field of Data Science and Big Data Analytics

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Discuss on predictive modeling techniques for data analytics	U
2	Use data preprocessing techniques for big data	A
3	Demonstrate the performance of data classification and regression models	A

4	Implement the use of Classification Trees and Rule-Based Models in big data analytics project	A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

KU6DSCCSC305:DATA COMMUNICATION AND COMPUTER NETWORKING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
6	DSC	300-399	KU6DSCCSC305	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4	0		30	70	100	2hrs.

Course Description:

The course data communication refers to the exchange of data between two or more networked or connected devices. The topics in this course include networking principles, Transmission Control Protocol/Internet Protocol, naming and addressing (Domain Name System), data encoding/decoding techniques, link layer protocols, routing protocols, transport layer services, congestion control, quality of service, network services, and Software Defined Networks.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Explain the basics of data communication, networking, internet and their importance	U
2	Identify the services and features of various protocol layers in data networks.	R/ U

3	Differentiate wired and wireless computer networks		R/U/A
4	Describe TCP/IP and their protocols.		U/A
5	Recognize the different internet devices and their functions.		U/A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE** Introduction to data communication	
		a) Ccomponents of data communication	12
	2	b) Network Transmission media- Guided media, Unguided media. Synchronous	
		c) Asynchronous data transmission. – Simplex, Half duplex, Duplex communication	
	3	Network topologies – star, Bus, ring, Mesh. , ,	
		a) Computer networks	
		b) Use	
	4	Hardware, network structure	
		a) point to point connection	
		b) multicast, broadcast	

287

		c) classification of networks-LAN, WAN, MAN	

2		**MODULE TITLE: Reference models**	
	1	The OSI reference model, TCP / IP reference model.	
	2	Comparison between OSI and TCP / Ip models.	12
	3	Data Link Layer, Design issues,	
	4	Services to network layer	
	5	Framing- character count, character stuffing, bit stuffing, physical layer coding violation	
	6	Error control, flow control,	
	7	Elementary data link protocols- unrestricted simplex protocol	
	8	simplex stop and wait protocol, simplex protocol for a noisy channel	

3		**MODULE TITLE: Network layer**	
	1	Design issues, services to the transport layer,	12
	2	a)Routing algorithms- adaptive, Non-adaptive algorithms	
		b) optimality principle, dijkstras shortest path routing algorithm,	
		c) flow-based routing, hierarchical routing	
	3	congestion control algorithms–the leaky bucket algorithm, the token bucket algorithm.	

4		**MODULE TITLE : Transport layer,**	
	1	Design issues , connection management-addressing	
		a) Establishing and releasing connection,	

2	Transport layer protocols- ,		12
	a) TCP		
	b) UDP		
3	Application layer – Basic Idea of telnet,		
	a) ftp, http, smtp, pop3		

5	Teacher Specific Module	
	Directions	
	Hands on training to identify and connect network devices. *Discussion on network issues in various design layers while communication*	12

KU6DSCCSC307 SOFTWARE DESIGN AND IMPLEMENTATION

Student of B.Sc. Computer Science Programme shall have to work on a project of FOUR credits under the supervision of a faculty member as per the curriculum. The duration of the project is 6 month and submission of the dissertation at the end of sixth semester. Individual projects are recommended but, in an instance, where the number of supervising teachers is less, the project may be done as group. The maximum number of students in a group shall be limited to THREE.

PROJECT EVALUATION

Evaluation of the Project Work shall be done under Mark System at two stages: 1. Internal Assessment (supervising teachers will assess the project and award internal Marks) 2. External evaluation (external examiner appointed by the University) Marks secured for the project will be awarded to candidates, combining the internal and external Marks. Assessment of different components may be taken as below.

CONTINUOUS EVALUATION FOR PROJECT

COMPONENT	WEIGHTAGE
Punctuality	20%
Relevance of topic System study / Design of tables	20%
Project Report	30%
Presentation & Viva-voce	30%
Total	100

END SEMESTER EVALUATION FOR PROJECT

COMPONENT	WEIGHTAGE
Written Synopsis/Abstract	12.5%
Content of the Project	12.5%
Quality of project work/Use of software/ tools	12.5%
Perfection of the work (Designs of tables/ Input & Output forms)	25%
Live demo	12.5%
Viva-voce	25%
Total	100%

Course Description:

Linux system administration is a process of setting up, configuring, and managing a computer system in a Linux environment. System administration involves creating a user account, taking reports, performing backup, updating configuration files, documentation, and performing recovery actions.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Discuss basic Linux commands and the file system structure	U
2	Judge the Boot loaders and the configuration files	E
3	Demonstrate different system services and maintenance	U, A
4	Implement Shell Scripting	U, A
5	Demonstrate the steps for Linux installation and System Configuration	U, A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		MODULE1: Introduction to Linux Operating system	
	1	Linux OS: History, Features and benefits of Linux, basic concepts of multi user system ,open source, free Software concepts	15
	2	Types of users in Linux, Types of files. BASICS :login, password, creating an account	
	3	Shell and commands, logout, changing password, files and directories, relative and absolute pathnames, directory tree, current working directory, referring home directory, creating new directories	
	4	Copying files, moving files, deleting files and directories , wild cards, hidden files, cat command	

MODULE	UNIT	DESCRIPTION	HOURS
2		MODULE 2: Vieditor and shell commands	
	1	Vi editor: different modes-command mode, insert mode, last line mode, vi Editing commands – moving within a file, deleting, editing, Copy and Paste Commands, Saving and Closing the file	15
	2	redirecting input/output-filter, pipes. File permissions: user, group, ls command (long listing), changing file permission	
	3	Shell Scripting: Types of shell, Basic shell configuration for bourne and bash shell: /etc/profile, /etc/bashrc, ~/.bash_profile, ~/.bash_login, ~/.profile,~/.bashrc, ~/.bash_logout, ~/.bash_history	
	4	Bourne shell scripts, script execution, variables and parameters, Control structures - Shell if then else, Shell if then elif, Shell for loop, Shell while loop, Shell until loop, Shell case, Shell function.	

3		MODULE 3: Linux Boot process and services	15
	1	LILO - boot process, /edc/lilo.conf file, GRUB - /etc/grub.conf file runlevels, rc files, startup scripts.	
	2	Mounting: mounting file systems, structure of /etc/fstab	
	3	Major services in Linux system - init, /etc/inittab file, login from terminal, syslog and its configuration file /etc/syslog.conf, periodic command execution: at and cron, crontab file	
	4	GUI, X windows. Starting and stopping different services – service command	

4		MODULE 4: System Maintenance and Linux Installation	
	1	System Maintenance: tmpwatch command, logrotate utility	15
	2	Backup and Restore: types of backup - full, differential, incremental, cp, tar commands	
	3	Linux Installation: Partitioning, MBR, SWAP	
	4	File system mount points, rpm utility - installation of packages.	

5	Teacher Specific Module	
	Directions	
	Teacher can adopt proper methodologies and evaluation methods related to the topics.	15

Essential Readings:

1. Unix Shell Programming, Yeshwanth kanethkar

2. Essential System Administration, O'reilly & Associates.

3. "The Linux Programming Interface: A Linux and UNIX System Programming Handbook" by

Michael Kerrisk.

4. Unix and shell Programming Behrouz A. Forouzan, Richard F. Gilberg.Thomson **Suggested Readings:**

1.   Unix in a Nutshell, by Daniel Gilly, O'Reilly & Associates.

2.   Linux Administration handbook, Nemeth, PHI.

3.   Red Hat Linux Bible.

4.   A user guide to the Unix system, Thomas, Yates Tata McGraw Hill

Course Description:

This course gives students an insight into the basics of cloud computing along with virtualization, cloud computing is one of the fastest growing domain from a while now. It will provide the students basic understanding about cloud and virtualization along with it how one can migrate over it.

Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Identify the basics of cloud computing	U
2	Discuss the main concepts and keytechnologies of cloud computing.	U/A
3	Examine the concept of virtualization in the cloud computing	U/A
4	Select the technologies for implementation and use of cloud	E
5	Relate the evolution of cloud from the existing technologies.	A n

Course Description:

Parallel computing is a type of computing architecture in which several processors simultaneously execute multiple, smaller calculations broken down from an overall larger, complex problem. The course give an outline of parallel architecture, CUDA etc.

Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Locate the use and problem solving in of parallel computers.	U
2	Classify Different Structures of Parallel Computers.	U
3	Compare the Performance Evaluation of Parallel Computers	U/An
4	Examine the programmes in CUDA	U

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE: INTRODUCTION**	12

1	History of Parallel Computers. Solving problems in parallel: Utilizing Temporal, Parallel Processing ,	
2	Utilizing Data Parallelism , Comparison of Temporal and Data Parallelism	
3	Data Parallel Processing with Specialized Processors.	

2	**MODULE TITLE:** STRUCTURE OF PARALLEL COMPUTERS	**12**
1	A Generalized Structure of a Parallel Computer, Classification of Parallel Computers, Vector Computers	
2	A Typical Vector Super Computer, Array Processors	
3	Shared Memory Parallel Computers	
4	Distributed Shared Memory Parallel Computers, Message Passing Parallel Computers.	

3	**MODULE TITLE :OPERATING SYSTEMS FOR PARALLEL COMPUTERS**	**12**
1	Resource Management , Process Management , Process Synchronization ,	
2	Inter-process Communication , Memory Management , Input/output (Disk Arrays) ,	
3	Basics of Performance Evaluation , Performance Measurement Tool	

4	**MODULE TITLE :COMPUTER UNIFIED DEVICE ARCHITECTURE**	12
1	The age of parallel processing, The rise of GPU computing, CUDA, NVIDIA Device driver	
2	Applications of CUDA, Development Environment-CUDA Enabled Graphics Processors	
3	CUDA Development Tool kit, Standard C compiler.	

5	**Teacher Specific Module**	
	Concerned teacher can adopt proper methodologies to apply and enhance the skill in respective topics.	12

Essential Readings:

1. Parallel Computers Architecture and Programming, V. Rajaraman, C. Siva Ram Murthy, PHI.

2. CUDA By Example, Jason Sanders, Edward Kandrot, Addison_Wesley.

4	-	-	30	70	100	2hrs.

Course Description:

This Course focuses on hands-on IoT concepts such as sensing, actuation and communication. It covers the development of Internet of Things (IoT) prototypes—including devices for sensing, actuation, processing, and communication and applications of IoT that helps to develop skills and experiences.

Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains

1	Understand the various concepts, terminologies and architecture of IoT systems..	U
2	Identify the use of sensors and actuators to design IoT	U/A
3	Understand and apply various protocols for design of IoT systems	U/A
4	Understand various applications of IoT	U/An

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

4	-	-	30	70	100	1.5 hrs.

Course Description:

This course intends to provide a comprehensive insight into various Blockchain techniques.
The objectives are to give an insightful introduction to the basic concepts of blockchain and
its applications in various domains.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Discus the fundamentals of blockchain technology	U
2	Identify the essentials of Bitcoin and beholding bitcoins as blockchains	U
3	Demonstrate the Ethereum Blockchain network	A

315

4	Identify the powers of blockchains and their applications in various domains	U

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		Introduction to blockchain	12
	1	Structure of blockchains, Blockchain life cycle.	
	2	working of a blockchain, picking a blockchain.	
	3	exploring blockchain applications, building trust with blockchains.	
	4	Blockchain in action: Use cases, introducing bitcoin blockchains.	

2		Bitcoin & Ethereum blockchains	12
	1	Understanding bitcoins, comprehending bitcoins as blockchains.	
	2	Analyzing Ethereum blockchains.	
	3	introducing ripple and factom blockchains and their importance.	

3		Powerful blockchain platforms	
	1	Getting introduced to Hyperledger, Hyperledger vision.	12

	2	Hyperledger sawtooth, understanding the blockchain fabric.	
	3	understanding business, and smart blockchains, IBM Blockchains.	
	4	Stellar: an optimized blockchain.	

4		Industry impacts of blockchains	
	1	Blockchains in financial technology, Blockchains in various industries such as insurance, Government.	12
	2	Real-estate, health care, Telecommunication, Transportation.	
	3	Studying different blockchain projects as a case studyand submit a report and present the work.	

5	**Teacher Specific Module**	
	Directions	
	Discussion on applications of Blockchain technology Discussion on cryptocurrency its usage and bussiness	12

Essential Readings:

1. Blockchain and Crypto Currency, Editors: Makoto YanoChris DaiKenichi MasudaYoshio Kishimoto,1 st Edition, Springer, 2020.

2. Blockchain or Dummies, Tiana Laurence, 1 st Edition , John Wiley & Sons, Inc, , 2017.

3. Blockchain Blueprint for a new economy, Melanie Swan, 1 st Edition,O'Reilly, 2017.

4. Blockchain Technology: Applications and Challenges, Panda, S.K., Jena, A.K., Swain, S.K., Satapathy, S.C. , 1 st Edition, Springer, 2021

5. Blockchain and Distributed Ledgers, Alexander Lipton and Adrien Treccani, 1 st Edition, World Scientific Press, 2021

KU7DSCCSC401: DATA PROCESSING USING PYTHON

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
7	DSC	400-499	**KU7DSCCSC401**	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2	-	35	65	100	1.5hrs.

Course Description:

This course introduces students to the principles and practices of data processing using Python, a powerful and widely-used programming language in data science and analytics. The course focuses on data acquisition, cleaning, transformation, and analysis using key Python libraries such as Pandas, NumPy, and Matplotlib, along with tools for handling various data formats including CSV, JSON, and Excel.

Course Prerequisite: Basic knowledge in Python programming

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Apply Python syntax and semantics to write well-structured and efficient programs.	A
2	Utilize functions with arguments to modularize code and improve reusability	U/E
3	Apply core data structures to organize and manipulate data in Python programs.	A
4	Apply techniques to read data from and write data to files using Python.	A
5	Interact with the operating system using Python libraries to automate file management and system commands	U/E

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

MODULE	UNIT	DESCRIPTION	HOURS
1		**Programming Environment and Python Basics:**	**15**
	1	Getting Started with Python Programming - Running code in the interactive shell, Editing, Saving, and Running script, Using editors - Jupyter.	
	2	Functions in Python, arguments to functions	
	3	The os and sys modules	
	4	Introduction to file I/O - Reading and writing text files, Manipulating binary files.	

		WORKING WITH PYTHON LIBRARIES	
2	1	NumPy - Basics, Creating arrays, Arithmetic, Slicing, Matrix Operations, Random numbers.	15
	2	Plotting and visualization	
	3	Pandas - Reading, Manipulating, and Processing Data	
	4	Working with Files and Data Formats (CSV, JSON, Excel)	

		DATA PROCESSING	
3	1	Data Cleaning: Handling Missing Data, Duplicates	15
	2	Data Transformation: Filtering, Sorting, Grouping	
	3	Data Exploration	
	4	Text Data Processing with Python	

		INTRODUCTION TO DATA WRANGLING FOR ML	
4	1	Grouping and Aggregation	15
	2	Merging and joining data sets	
	3	Exploratory Data Analysis (EDA)- case study with real world data set	
	4	Introduction to APIs and Web Data Extraction- Use of requests and BeautifulSoup	

		Teacher Specific Module	
5		*Lab Exercises*	

	Direct the students to read and write binary files Perform matrix operations using Numpy Create visualization using Matplotlib and seaborn Read csv, excel and JSON files using Pandas Work with text data processing (use re, nltk, or string libraries.)	
		15

KU7DSCCSC403: SOFT COMPUTING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
7	DSC	400-499	**KU7DSCCSC403**	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4	-	-	30	70	100	2hrs.

Course Description:

This course provides an in-depth introduction to Soft Computing, a consortium of methodologies that aim to exploit the tolerance for imprecision, uncertainty, partial truth, and approximation to achieve robust and low-cost solutions. It focuses on techniques that mimic human reasoning and learning, such as Fuzzy Logic, Neural Networks, Genetic Algorithms, and Hybrid Systems.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Defines the basic concepts of soft computing	U/E
2	Discuss about neural networks and its various applications	U
3	Analyse the use of fuzzy logic in various contexts	An
4	Illustrate the use Genetic Algorithms	A
5	Illustrate the use of neural networks and hybrid systems	A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**INTRODUCTION TO SOFT COMPUTING**	**12**
	1	What is Soft Computing, Difference between Hard and Soft Computing, areas of soft computing	
	2	Requirements and applications of soft computing	
	3	Basics of Neural Network - Learning rules and various activation functions, Single layer Perceptron, Back Propagation networks	
	4	Architecture of Back Propagation (BP) Networks, Backpropagation Learning, Recent Applications	

MODULE	UNIT	DESCRIPTION	HOURS
2		**FUZZY LOGIC AND FUZZY SYSTEMS**	12
	1	Fuzzy Set theory, Fuzzy versus Crisp set, Fuzzy Relation, Fuzzification, Minmax Composition,	
	2	Defuzzification Method, Fuzzy Logic	
	3	Fuzzy Rule based systems, Predicate logic, Fuzzy Decision Making	
	4	Fuzzy Classification	

MODULE	UNIT	DESCRIPTION	HOURS
3		**GENETIC ALGORITHMS**	12
	1	History of Genetic Algorithms (GA) , Working Principle,	
	2	Various Encoding Methods	
	3	Fitness Function, GA Operators- Reproduction, Crossover, Mutation	
	4	Convergence of GA, Bit wise operation in GA	

MODULE	UNIT	DESCRIPTION	HOURS
4		**HYBRID SYSTEMS**	12
	1	Sequential Hybrid Systems, Auxiliary Hybrid Systems	

	2	Embedded Hybrid Systems, Neuro-Fuzzy Hybrid Systems	
	3	Neuro-Genetic Hybrid Systems	
	4	Case studies on recent applications of Genetic Algorithms / Fuzzy Logic	

	Teacher Specific Module	
5	*Directions:* • *Implement a **single-layer perceptron** in Python to solve the **logical OR** function* • *Design and implement a fuzzy logic controller (FLC) to simulate a room temperature control system.(Define fuzzy sets for inputs: **Temperature (Cold, Warm, Hot)**)* • *Build a neuro-fuzzy system that classifies patterns (e.g., Iris dataset). Tools: scikit-fuzzy, pandas, scikit-learn, optionally Keras*	
		12

KU7DSCCSC404: NATURAL LANGUAGE PROCESSING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
7	DSC	400-499	**KU7DSCCSC404**	4	60

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4	-	-	30	70	100	2hrs.

Course Description:

This course provides a comprehensive introduction to Natural Language Processing (NLP), the field of computer science and artificial intelligence concerned with enabling machines to understand, interpret, and generate human language. Students will explore both foundational concepts and modern techniques used in NLP, including text preprocessing, part-of-speech tagging, and language modelling.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning Domains
1	Define the phases of traditional NLP as well as various NLP tasks	U/E
2	Apply Hidden Markov Models, and Naive Bayes models for various NLP tasks	A
3	Apply word embedding techniques and N-gram language models for Named Entity Recognition	An
4	Apply deep learning models like LSTM, GRU for sequence modeling, and CNN for coreference resolution	A

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

Mapping of Course Outcomes to PSOs

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**INTRODUCTION TO NLP**	**12**
	1	Phases of Traditional NLP - Lexical Analysis, Syntactic Analysis, Semantic Analysis,	
	2	Discourse Analysis, Pragmatic Analysis	
	2	Introduction to NLP Tasks - Parts-of-Speech Tagging, Word Sense Disambiguation, Anaphora Resolution, Text classification, Recognizing Textual Entailment, Named Entity Recognition	
2		**INTRODUCTION TO STATISTICAL NLP**	12
	1	Vector Space Models - Bag-of-Words, TF-IDF weighing, PPMI	
	2	Basics of Supervised and Semi-supervised Learning for various NLP tasks - Noisy Channel Model for spelling correction.	
	3	Naive Bayes model for Text Classification.	
3		**INTRODUCTION TO NEURAL NLP**	12
	1	Word Embedding - Contextual and non-contextual Word Embedding. Subword embeddings.	
	2	Evaluation of word vectors. N-gram language models.	
	3	Neural Networks for named entity recognition- Word window classification.	

329

4	**NATURAL LANGUAGE GENERATION**	
	1	Seq2Seq models - Attention	
	2	Case studies and real-world applications of NLP in various domains.	12
	3	Introduction to Large Language Models.	

5	**Teacher Specific Module**	
	• *Implement the basic phases of the traditional NLP pipeline and perform foundational NLP tasks* **Tools***: spaCy, NLTK, NeuralCoref* **Dataset***: Small paragraph from News or literature* • Convert a set of documents into: Bag-of-Words TF-IDF **Tools:** Scikit-learn, pandas, matplotlib **Dataset:** IMDB	
		12

Essential Readings:

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
4	-	-	30	70	100	2hrs.

Course Description:

This course offers a thorough introduction to Computer Vision, the field of computer science that enables machines to interpret and understand visual information from the world. It covers both foundational techniques and modern approaches, including image processing, feature extraction, object detection, image segmentation, and deep learning-based vision models.

Course Prerequisite: NIL

Course Outcomes:

CO No.	Expected Outcome	Learning

331

			Domains
	1	Summarize the fundamental concepts and principles of computer vision, including image formation, transformations, and photometric image formations.	U/E
	2	Illustrate the concepts of linear and non-linear filtering techniques, their role in image enhancement and noise reduction.	A
	3	Evaluate the performance of periodic noise reduction filters and image segmentation algorithms.	An

Remember (R), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C)

Mapping of Course Outcomes to PSOs

COURSE CONTENTS

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**INTRODUCTION**	**12**
	1	Computer Vision, Image formation, 2D transformation, 3D transformations, 3D to 2D projections	
	2	Photometric image formations: Lighting, Reflectance and shading, optics	
	3	Digital camera: Sampling and aliasing, colour, compression	

MODULE	UNIT	DESCRIPTION	HOURS
2		**FILTERING AND FITTING**	12
	1	Point operators: Pixel transforms, Colour transforms	
	2	Linear filtering: Non-linear filtering, Bilateral filtering	
	3	Model fitting and optimization: Scattered data interpolation. Variational methods and regularization, Markov random fields	

332

3		**RECOGNITION AND FEATURE DETECTION**	
	1	Recognition: Instance recognition.	12
	2	Image classification, Feature-based methods, Deep networks	
	3	Object detection, video understanding. Feature detection and matching: feature detectors, feature descriptors, feature matching, edge detection	

4		**COMOUTATIONAL PHOTOGRAPHY**	
	1	Photometric calibration, High dynamic range imaging	12
	2	Image matting and compositing: blue screen matting, natural image matting, optimization-based matting	
	3	Smoke, shadow, and flash matting	

5		**Teacher Specific Module**

4	0	-	30	70	100	1.5hrs.

Course Description: This course offers a comprehensive overview on the various concepts involved in bioinformatics.

COURSE OUTCOME

CO No.	Expected Outcome		Learning Domains
1	Summarize al applications of bioinformatics	the foundation concepts and	U
2	Sketch DNA and RNA structures, Genetic Code, Gene Expression, and RNA classification.		Ap

334

3	Illustrate sequence alignment techniques and usage of scoring matrices	Ap
4	Outline the structure of protein and amino acids, and basic concepts of molecular docking.	U

Mapping of Course Outcomes to PSOs

	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5	PSO 6	PSO 7
CO 1	3		2				
CO 2	2	3	2				
CO 3	3	2	1				
CO 4	3	1	2				

	Unit	Content	Hrs
I		**Introduction**	**12**
	1	Introduction to Bioinformatics and Computational biology, Nature & Scope of Bioinformatics.	
	2	Biological databases -Primary database, Secondary database, Nucleic Acid databases, Protein database	
	3	The central dogma of molecular biology.	

	4	Applications of Bioinformatics.	
II		**DNA and RNA Structure**	**12**
	1	DNA and RNA structure – Nucleic Acid structure and function, Genetic Code, Genes and Gene expression.	
	2	Transcription, Translation	
	3	General introduction to Gene expression in prokaryotes and eukaryotes	
	4	RNA classification –coding and non-coding RNAs- mRNA, tRNA, microRNA and circular RNA.	
III		**Sequence Alignment**	**12**
	1	Sequence alignment – local/global, pairwise sequence alignment, Needleman algorithm, global and local alignments, Multiple sequence alignment, BLAST.	
	2	Scoring matrices: basic concept of a scoring matrix, Matrices for nucleic acid and protein sequences.	

	3	Differences between distance & similarity matrix.	
IV		**Amino Acids and Protein Structure**	**12**
	1	Amino acids- Building blocks of proteins	
	2	Protein Structure- Primary, Secondary - alpha helix, beta sheets & turns, Tertiary and Quaternary structures. Protein Folding	
	3	Introduction to Molecular Docking	
V		**Teacher Specific module**	**12**
		Literature review on Biomedical data classification **Lab Exercises** 1. Basic programs in Python. 2. Implementation of Bioinformatics problems

Contents for Classroom Transaction:

MODULE	UNIT	DESCRIPTION	HOURS
1		**MODULE TITLE Philosophical Underpinnings of Research**	**12**
	1	Introduction to Research: Novelty, Originality, Organized Method of Investigation, and Communication of Problem, Data, Method, and Results for Peer Group Verification; Paradigm and paradigm shift.	
	2	Types of Research: Theoretical, Empirical, Experimental, and Design and Characterization of New Materials, Components, Processes, and Systems.	
	3	Broad Objectives of Research: Problem-oriented—Defining Problems and Problem Issues, Analysing Data, Predicting, and Designing; Technique-oriented-Improving Performance and Expanding Scope.	
	4	Research Topic, Problem, Questions, Objectives, and Scope - Methodology, Methods, Tools, and Techniques - Research Ethics, Plagiarism, and Their Prevention	

MODULE	UNIT	DESCRIPTION	HOURS
2		**MODULE TITLE:** Measurement, Data, and Analytics	**12**
	1	Structured and Unstructured Data, Scales of Measurement.	
	2	Probability and Random Variables	
	3	Population and Sample, Descriptive Statistics, Data Visualization	
	4	Sampling and Estimation, Hypothesis Testing, ANOVA, Correlation, and Regression	
	5	Data Analytics: Elements of Association, Clustering, and Classification.	

MODULE	UNIT	DESCRIPTION	HOURS
3		**MODULE TITLE :** Research Methods for Computer Science	**12**
	1	Formal Methods: Formal Specification, Algorithm, and complexity	
	2	Building Artefacts: Proof of Performance, Proof of Concept, and Proof of Existence;	

340

	3	Complexity Process Methodology: Methods for Software Engineering and Human-Computer Interaction, Cognitive Processes ,Interactive Games, Social Networks, and Web Analytics.	

4	**MODULE TITLE :** Research Documentation		
	1	Elements of Preparing a Paper and a Thesis: Title, Abstract, Keywords, Acknowledgements, Symbols and Abbreviations.	
	2	Introduction, Literature Review, Materials and Methods, SI Units, Mathematical Materials, Graphical and Tabular Presentation.	12
	3	Results and Discussion ,Conclusion, Interpretation, Generalization, Scope for Future Work, Citations and List of References, and Appendixes.	

5	**Teacher Specific Module**	
	Discussion on various research issues Analyse the papers related with the discussed issues Analyse the types of research methodologies applied in the related papers.	12

Detailed Syllabus:

Module	Unit	Content	Hrs
I		**Introduction to Prompt Engineering**	**15 hrs**

350

1	Prompt Engineering- Definition, Importance of Prompt Engineering, Role of Prompt Engineers, Application domains- Education, Engineering, Entertainment	
2	Principles of Prompt Engineering- Understanding User Prompts- Types of Prompts- Information Prompts, Confirmation Prompts, Suggestion Prompts, Social Influence Prompts. Factors influencing prompt effectiveness- clarity, timing, relevance, language and tone, personalization.	
3	Foundation of Language Models- Definition, tasks- Text generation, Translation, Question Answering, Summarization, Natural Language Inference, other capabilities- chatbots, virtual assistants, Examples of Language Models- Gemini, BERT, GPT based Models, GPT-3, GPT4, LaMDA, PaLM, Parti.	
4	Processing text in Language Models- Tokenization, Generation of text in Language Models- Beam Search	

II	**Crafting Prompts**	15
1	Types of Prompts. Visual Prompts, Auditory Prompts, Tactile Prompts, Open ended Prompts, closed ended prompts, Instructional prompts, Contextual prompts.	
2	Factors influencing Model responses- Context, Length, Structure, Complexity, Fine tuning. Conciseness and specificity in prompt design	

3	Query Formulation Techniques, importance of context in prompt formulation, Techniques for crafting clear and effective instructions, tailoring prompts to specific tasks or domains
4	Structuring Prompts for Unambiguous understanding- Clear Communication, Contextual Cues- images, code. Best practices to be followed for designing user prompts –- designing effective prompt systems - understanding user perspective, clear and concise prompts, providing context, considering user input, feedback and validation, iterative design process. Strategies for iteratively improving prompts based on feedback and performance analysis, Feedback Mechanism- Quantitative analysis, qualitative analysis, iterative prompt design, A/B testing,
5	Approaches for adjusting prompt language, structure and complexity, Fine tuning, techniques used – Supervised learning, Reinforcement learning

	6	Prompt generation Tools- Prompt Studio, Prompt Bard, Prompt Insight, Prompt evaluation tools- Prompt Evaluator, Prompt Ranker, Prompt Tuning	
III		**Prompt Engineering Strategies and Applications**	**15**
	1	Pillars of Prompting- Providing Examples, Giving Direction, Formatting Responses, Evaluating Quality, Chaining AIs	
	2	Debiasing techniques, Context Manipulation, Controlled Generation, Iterative Prompting	
	3	Prompt strategies for tasks – summarization, translation, Q & A, creative writing, other tasks	
	4	Role of Prompt Engineering in various applications- Search and Recommendation, Natural Language Processing, Creative AI, AT Safety. Examples of applications using prompt engineering- Google AI, Microsoft AI, Salesforce AI, Open AI	
IV		**Prompt Engineering Technologies & Ethical issues**	**15**
	1	Machine Learning Models for personalized prompts- Rule based Models, Collaborative filtering Models, Content based Models, Hybrid Models	
	2	Emerging Technologies in Prompting- Natural Language Processing, Machine Learning, Augmented Reality, Virtual Reality, Sustainable Prompting Strategies- Energy efficient hardware, optimizing prompt frequency and timing	

	3	Ethical considerations in Prompt Engineering- Privacy and Consent, Manipulative prompting practices, Ensuring Prompt conformity to Ethical standards	
	4	Handling Constraints, Addressing Biases in prompts and response, Interpreting Model Output, tools used for auditing bias and fairness example- Google Text to Text Transfer Model, Metrics for assessing quality and effectiveness of prompts	
V		**Teacher specific Module**	**15**
	1	Advanced Techniques-Meta Prompting, Multimodal prompt engineering, prompt embedding, conditional generation.	
	2	Prompt techniques- Zero-shot Prompting, Auto-prompting, Few shots prompting, Chain of Thought Prompting, Self-consistency prompting, General Knowledge Prompting, Tree of Thoughts prompting

Exercises

- Familiarization of any one Language Model /application /GPT

- Select a prompt generation tool or framework (e.g., GPT-3, Prompt Studio).

- Create effective prompts for generation of text, creative writing, content generation, resume writing., poetry, fiction, non fiction or any other genre

- Design prompts for different scenarios (e.g., recommendation prompts for an e-commerce website, feedback prompts for a survey).

- Evaluate the generated prompts based on clarity, relevance, and user engagement.

- Discuss strategies for improving prompt effectiveness and iterate on the design process

- Compare various prompt generation tools (e.g., GPT-3, OpenAI Codex, DialoGPT).

- Case Studies in Prompt Engineering- Successful prompting campaigns, Failures in Prompt Engineering

- Case Studies demonstrating effective prompt engineering strategies

Assessment Rubrics

Evaluation Type		Marks
End Semester Evaluation		**70**
Continuous Evaluation		**30**
a)	Test Paper- 1	5
b)	Model Examination	10
c)	Assignment- 2 Numbers	10
d)	Seminar	5
e)	Book/ Article Review	
f)	Viva-Voce	
g)	Field Report	
Total		**100**

KU8DSCCSC 416: MEDICAL IMAGE PROCESSING

Semester	Course Type	Course Level	Course Code	Credits	Total Hours
8	DSC	400-499	KU8DSCCSC416	4	75

Learning Approach (Hours/ Week)			Marks Distribution			Duration of ESE (Hours)
Lecture	Practical/ Internship	Tutorial	CE	ESE	Total	
3	2	-	35	65	100	1.5hrs.

COURSE OUTCOME

CO No.	Expected Outcome	Learning Domains
1	Summarize about medical image processing techniques	U
2	Discuss about medical image formation principles	U
3	Describe about Imaging modalities	U
4	Explain about Nuclear imaging techniques	U

Mapping of Course Outcomes to PSOs

	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5	PSO 6	PSO 7
CO 1	3		2				
CO 2	2		2				2
CO 3	2	2	1				
CO 4	3	1	2				

Detailed Syllabus:

Module	Unit	Content	Hrs
I		**Medical Image Processing**	15
	1	Introduction to Medical imaging, Elements of Image Processing, Image Processing Techniques	
	2	Digital Image Classification Types, Brief history, Importance, Applications, Trends, Challenges	
	3	Spatial Domain Filtering, Filtering in Frequency domain	
	4	Image restoration, Image Compression, Waveletbased image compression, Morphological Image Processing, Image Segmentation.	
II		**Medical Image Formation Principles**	12
	1	X-Ray and Computed Tomography (CT) imaging, Basic principles of CT	
	2	2D Image reconstruction- Fourier space and Filtered back projection methods. Iterative reconstruction	
	3	3D reconstruction basics; Discrete Radon Transform (DRT).	
III		**Imaging Modalities:**	18
	1	Magnetic Resonance Imaging (MRI), Introduction, Nuclear Spin, Nuclei in a Magnetic Field	
	2	RF Excitation for the Resonance Phenomenon Generation- MR Signal Generation and Acquisition, MR Signal Characteristics - Relaxation, Proton Density	
	3	MR Signal Generation and Acquisition, MR Signal Characteristics - Relaxation, Proton Density- The Bloch Equations, Multiple RF Pulses	
	4	The Bloch Equations, Multiple RF Pulses- Magnetic Field Gradients-, Spatial Localization of MR Signals	
	5	Timing Diagram of an Imaging Sequence- Acquiring MR Signals in the K-Space	
	6	Different MRI sequences-Spin Echo Sequence, Gradient Echo Sequence	
IV		**Nuclear Imaging**	15
	1	Positron Emission Tomography (PET), Single Photon Emission Computed Tomography (SPECT), Ultrasound Imaging, Mathematical principles, Applications;	
	2	Medical Image Storage: Archiving and Communication Systems and Formats Picture Archiving and Communication System(PACS),	
	3	Formats - DICOM, Radiology Information Systems (RIS) and Hospital Information Systems (HIS);	

	4	Medical Image Visualization: Fundamentals of visualization, Different generations of visualization techniques, surface and volume rendering/visualization.	
	5	Introduction to Microscopes: Types of Microscopes, Microscopy Imaging Techniques – Bright field microscopy Dark field microscopy, Phase contrast microscopy, Differential Interference Contrast (DIC) microscopy, Fluorescence microscopy, Polarizing microscopy.	
V		**Teacher specific module**	**15**
	1	Medical Image Segmentation: Histogram-based methods, Region Growing, Watersheds, Edge based segmentation techniques, Multispectral Techniques, Segmentation by Fuzzy clustering methods and issues, Segmentation with Neural Networks, Segmentation with Deformable Models

4	-	-	30	70	100	1.5hrs.

O No.	Expected Outcome	Learning Domains
1	Outline neural network fundamentals.	U
2	Demonstrate neural network architectures	Ap
3	Experiment various learning methods	Ap
4	Sketch the features and applications of SOM	Ap

Mapping of Course Outcomes to PSOs

	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5	PSO 6	PSO 7
CO 1	3	2	2				
CO 2	2		2				
CO 3	3	2	1				
CO 4	3	1	2				

Detailed Syllabus:

Module	Unit	Content	Hrs
I		**Introduction**	**1**
	1	Introduction, Why neural network?, Research History, Biological Neuron model.	
	2	Artificial Neuron model, Notations, Neuron equation	
	3	Model of Artificial Neuron: Artificial neuron - basic elements,	
	4	Activation functions – Threshold function, Piecewise linear function, Sigmoidal function, Example	
II		**Neural Network Architectures**	**12**
	1	Neural Network Architectures: Single layer Feed-forward network, Multi layer Feed-forward network, Recurrent networks.	
	2	Learning Methods in Neural Networks- Learning algorithms: Unsupervised Learning - Hebbian Learning,	
	3	Competitive learning; Supervised Learning	
	4	Stochastic learning, Grant descent learning; Reinforced Learning.	
III		**Taxonomy Of Neural Network Systems**	**12**
	1	Popular neural network systems; Classification of neural network systems with respect to learning methods and architecture types.	

	2	Single-Layer NN System Single layer perceptron : Learning algorithm for training Perceptron, Linearly separable task, XOR Problem; ADAptive LINear Element (ADALINE) : Architecture, Training.	
	3	Multilayer Perceptrons: Introduction, Some Preliminaries, Batch Learning and On-Line Learning.	
	4	The Back-Propagation Algorithm, XOR Problem.	
IV		**Self Organizing Maps**	**12**
	1	Introduction; Two basic feature-mapping models; SOM: Competitive process, Cooperative process, Adaptive process;.	
	2	Summary of SOM Algorithm; Properties of feature map	
	3	Kohonen Self Organizing Maps: Architecture, Algorithm, Application.	
V		**Teacher specific module**	**12**
		Lab Exercises 1. Implement AND problem. 2. Implement XOR problem. 3. Single-Layer Perceptron Implementation . Implement a single-layer perceptron in a programming language of choice (Python recommended). . Train the perceptron on a binary classification task using a simple dataset. . Visualize the decision boundary and analyze the perceptron's performance. 1. Multi-Layer Perceptron (MLP) Demonstration: . Develop a multi-layer perceptron (MLP) . Train the MLP on a dataset such as MNIST	

| | 1 | Applications of Artificial Neural Networks: Pattern Recognition, Medicine, Speech Production, Speech Recognition, Business. | |
| | 2 | Deep Neural Networks (Basic Concepts only) | |

| | | | for handwritten digit classification.
. Experiment with different architectures, activation functions, and optimization algorithms to optimize performance.
2. Implement Self organizing maps.
3. Implement applications using Neural Network. | |
